Typographic Conventions

name; <i>f</i> name; <i>g</i> name; <i>m</i> name; <i>s</i> name; <i>v</i> *name*; <i>c</i> name	▷ Symbol defined in Common Lisp; esp. function, generic function, macro, special operator, variable, constant.
<i>them</i>	▷ Placeholder for actual code.
me	▷ Literal text.
[<i>foo</i> <u>bar</u>]	▷ Either one <i>foo</i> or nothing; defaults to bar .
<i>foo</i> *; { <i>foo</i> }*	▷ Zero or more <i>foos</i> .
<i>foo</i> ⁺ ; { <i>foo</i> } ⁺	▷ One or more <i>foos</i> .
<i>foos</i>	▷ English plural denotes a list argument.
{ <i>foo</i> <i>bar</i> <i>baz</i> }; $\begin{cases} foo \\ bar \\ baz \end{cases}$	▷ Either <i>foo</i> , or <i>bar</i> , or <i>baz</i> .
$\begin{cases} foo \\ bar \\ baz \end{cases}$	▷ Anything from none to each of <i>foo</i> , <i>bar</i> , and <i>baz</i> .
\widehat{foo}	▷ Argument <i>foo</i> is not evaluated.
\widetilde{bar}	▷ Argument <i>bar</i> is possibly modified.
<i>foo</i> ^B *	▷ <i>foo</i> * is evaluated as in sprogn ; see page 20.
<u><i>foo</i></u> ; <u><i>bar</i></u> ; <u><i>baz</i></u> _{<i>z</i>} _{<i>n</i>}	▷ Primary, secondary, and <i>n</i> th return value.
T; NIL	▷ t , or truth in general; and nil or () .

1.1 Predicates

$$\begin{array}{l} (f \mathbf{asinh} \ a) \\ (f \mathbf{acosh} \ a) \\ (f \mathbf{atanh} \ a) \end{array} \triangleright \underline{\mathbf{asinh} \ a}, \underline{\mathbf{acosh} \ a}, \text{ or } \underline{\mathbf{atanh} \ a}, \text{ respectively.}$$

$(_f\mathbf{cis}\ a)$ \triangleright Return $e^{i\ a} = \cos a + i \sin a$.

(***f*conjugate** *a*) ▷ Return complex conjugate of *a*.

$(\text{fmax } num^+)$
 $(\text{fmin } num^+)$ \triangleright Greatest or least, respectively, of *nums*.

$$\left(\begin{array}{l} \{f\text{round} | f\text{round}\} \\ \{f\text{floor} | f\text{floor}\} \\ \{f\text{ceiling} | f\text{ceiling}\} \\ \{f\text{truncate} | f\text{truncate}\} \end{array} \right) n \text{ [d}_{\square}\text{]})$$
 ▷ Return as **integer** or **float**, respectively; n/d rounded, or rounded towards $-\infty$, $+\infty$, or 0, respectively; and remainder.

$(\left\{ \begin{smallmatrix} \text{mod} \\ \text{rem} \end{smallmatrix} \right\} \ n \ d)$
 ▷ Same as `ffloor` or `ftruncate`, respectively, but return remainder only.

(*random limit* [*state* *v*random-state**])

▷ Return non-negative random number less than *limit*, and of the same type.

(**make-random-state** [$\{state \mid \text{NIL} \mid \text{T}\} \overline{\text{NIL}}$])
 ▷ Copy of **random-state** object *state* or of the current random state; or a randomly initialized fresh random state.

$v_{\text{random-state}}$ ▷ Current random state.

$(_f\text{float-sign } num-a \text{ } [num-b]) \triangleright num-b \text{ with } num-a\text{'s sign.}$

▷ Number of magnitude 1 representing sign or phase of n .

(numerator *rational*)
(denominator *rational*)
▷ Numerator or denominator, respectively, of *rational's*
canonical form.

(***f**realpart number*)
 (***f**imagpart number*)
 ▷ Real part or imaginary part, respectively, of *number*.

(**f****complex** real [imag0]) ▷ Make a complex number.

(*f* **phase** *num*) ▷ Angle of *num*'s polar representation.

$$(\text{fabs } n) \quad \triangleright \text{Return } |n|.$$

(*r***rational** *real*)
 (*r***rationalize** *real*)
 ▷ Convert *real* to rational. Assume complete/limited accuracy for *real*.

(**float** *real* [*prototype*0.0f0])
 ▷ Convert *real* into float with type of *prototype*.

1.3 Logic Functions

Negative integers are used in two's complement representation.

(**bool** operation int-a int-b)
 ▷ Return value of bitwise logical *operation*. *operations* are

$$_c\text{boole-1} \quad \triangleright \quad \text{int-}a.$$

cboole-2 \triangleright *int-b.*

$$_c\text{boole-c1} \quad \triangleright \quad \neg \text{int-a.}$$
$$_c\text{boole-c2} \quad \triangleright \quad \neg \text{int-b.}$$

cboole-set ▷ All bits set.

boole-clr ▷ All bits zero.

boole-eqv \triangleright $int-a \equiv int-b$.
boole-and \triangleright $int-a \wedge int-b$.
boole-andc1 \triangleright $\neg int-a \wedge int-b$.
boole-andc2 \triangleright $int-a \wedge \neg int-b$.
boole-nand \triangleright $\neg(int-a \wedge int-b)$.
boole-ior \triangleright $int-a \vee int-b$.
boole-orc1 \triangleright $\neg int-a \vee int-b$.
boole-orc2 \triangleright $int-a \vee \neg int-b$.
boole-xor \triangleright $\neg(int-a \equiv int-b)$.
boole-nor \triangleright $\neg(int-a \vee int-b)$.

(flognot integer) \triangleright $\neg integer$.

(flogeqv integer*)

(flogand integer*)

\triangleright Return value of exclusive-nored or anded integers, respectively. Without any integer, return -1.

(flogandc1 int-a int-b) \triangleright $\neg int-a \wedge int-b$.

(flogandc2 int-a int-b) \triangleright $int-a \wedge \neg int-b$.

(flognand int-a int-b) \triangleright $\neg(int-a \wedge int-b)$.

(flogxor integer*)

(flogior integer*)

\triangleright Return value of exclusive-ored or ored integers, respectively. Without any integer, return 0.

(flogorc1 int-a int-b) \triangleright $\neg int-a \vee int-b$.

(flogorc2 int-a int-b) \triangleright $int-a \vee \neg int-b$.

(flognor int-a int-b) \triangleright $\neg(int-a \vee int-b)$.

(flogbitp i int) \triangleright T if zero-indexed *i*th bit of *int* is set.

(flogtest int-a int-b)

\triangleright Return T if there is any bit set in *int-a* which is set in *int-b* as well.

(flogcount int)

\triangleright Number of 1 bits in *int* ≥ 0 , number of 0 bits in *int* < 0 .

1.4 Integer Functions

(finteger-length integer)

\triangleright Number of bits necessary to represent *integer*.

(fldb-test byte-spec integer)

\triangleright Return T if any bit specified by *byte-spec* in *integer* is set.

(fash integer count)

\triangleright Return copy of *integer* arithmetically shifted left by *count* adding zeros at the right, or, for *count* < 0 , shifted right discarding bits.

(fldb byte-spec integer)

\triangleright Extract byte denoted by *byte-spec* from *integer*. **setfable**.

$\left\{ \begin{array}{l} \text{fdeposit-field} \\ \text{fldpb} \end{array} \right\} int-a \text{ byte-spec } int-b$

\triangleright Return int-b with bits denoted by *byte-spec* replaced by corresponding bits of *int-a*, or by the low **(fbyte-size byte-spec)** bits of *int-a*, respectively.

(fmask-field byte-spec integer)

\triangleright Return copy of *integer* with all bits unset but those denoted by *byte-spec*. **setfable**.

(fbyte size position)

\triangleright Byte specifier for a byte of *size* bits starting at a weight of 2^{position} .

(fbyte-size byte-spec)

(fbyte-position byte-spec)

\triangleright Size or position, respectively, of *byte-spec*.

1.5 Implementation-Dependent

$\left. \begin{array}{l} \text{cshort-float} \\ \text{csingle-float} \\ \text{cdouble-float} \\ \text{clong-float} \end{array} \right\} \begin{array}{l} \text{epsilon} \\ \text{negative-epsilon} \end{array}$

▷ Smallest possible number making a difference when added or subtracted, respectively.

$\left. \begin{array}{l} \text{cleast-negative} \\ \text{cleast-negative-normalized} \\ \text{cleast-positive} \\ \text{cleast-positive-normalized} \end{array} \right\} \begin{array}{l} \text{short-float} \\ \text{single-float} \\ \text{double-float} \\ \text{long-float} \end{array}$

▷ Available numbers closest to $-\infty$ or $+\infty$, respectively.

$\left. \begin{array}{l} \text{cmost-negative} \\ \text{cmost-positive} \end{array} \right\} \begin{array}{l} \text{short-float} \\ \text{single-float} \\ \text{double-float} \\ \text{long-float} \\ \text{fixnum} \end{array}$

▷ Available numbers closest to $-\infty$ or $+\infty$, respectively.

(f decode-float *n*)

(f integer-decode-float *n*)

▷ Return significand, exponent, and sign of float *n*.

(f scale-float *n* [*i*]) ▷ With *n*'s radix *b*, return nb^i .

(f float-radix *n*)

(f float-digits *n*)

(f float-precision *n*)

▷ Radix, number of digits in that radix, or precision in that radix, respectively, of float *n*.

(f upgraded-complex-part-type *foo* [*environment*_{NTI}])

▷ Type of most specialized **complex** number able to hold parts of type *foo*.

2 Characters

The **standard-char** type comprises a-z, A-Z, 0-9, Newline, Space, and !? \$" ' , . : ; * + - / \ ~ _ ^ ` < = > # % & () [] { } .

(f characterp *foo*)

(f standard-char-p *char*)

▷ T if argument is of indicated type.

(f graphic-char-p *character*)

(f alpha-char-p *character*)

(f alphanumericp *character*)

▷ T if *character* is visible, alphabetic, or alphanumeric, respectively.

(f upper-case-p *character*)

(f lower-case-p *character*)

(f both-case-p *character*)

▷ Return T if *character* is uppercase, lowercase, or able to be in another case, respectively.

(f digit-char-p *character* [*radix*_{NTI}])

▷ Return its weight if *character* is a digit, or NIL otherwise.

(f char= *character*⁺)

(f char/= *character*⁺)

▷ Return T if all *characters*, or none, respectively, are equal.

(f char-equal *character*⁺)

(f char-not-equal *character*⁺)

▷ Return T if all *characters*, or none, respectively, are equal ignoring case.

(f char> *character*⁺)

(f char>= *character*⁺)

(f char< *character*⁺)

(f char<= *character*⁺)

▷ Return T if *characters* are monotonically decreasing, monotonically non-increasing, monotonically increasing, or monotonically non-decreasing, respectively.

(inline *function*^{*})

(notinline *function*^{*})

▷ Tell compiler to integrate/not to integrate, respectively, called *functions* into the calling routine.

(optimize $\left\{ \begin{array}{l} \text{compilation-speed} | (\text{compilation-speed } n_{\text{NTI}}) \\ \text{debug} | (\text{debug } n_{\text{NTI}}) \\ \text{safety} | (\text{safety } n_{\text{NTI}}) \\ \text{space} | (\text{space } n_{\text{NTI}}) \\ \text{speed} | (\text{speed } n_{\text{NTI}}) \end{array} \right\}$)

▷ Tell compiler how to optimize. *n* = 0 means unimportant, *n* = 1 is neutral, *n* = 3 means important.

(special *var*^{*}) ▷ Declare *vars* to be dynamic.

16 External Environment

(f get-internal-real-time)

(f get-internal-run-time)

▷ Current time, or computing time, respectively, in clock ticks.

cinternal-time-units-per-second

▷ Number of clock ticks per second.

(f encode-universal-time *sec min hour date month year* [*zone*_{current}])

(f get-universal-time)

▷ Seconds from 1900-01-01, 00:00, ignoring leap seconds.

(f decode-universal-time *universal-time* [*time-zone*_{current}])

(f get-decoded-time)

▷ Return second, minute, hour, date, month, year, day, daylight-p, and zone.

(f short-site-name)

(f long-site-name)

▷ String representing physical location of computer.

$\left\{ \begin{array}{l} \text{f lisp-implementation} \\ \text{f software} \\ \text{f machine} \end{array} \right\} \left\{ \begin{array}{l} \text{type} \\ \text{version} \end{array} \right\}$

▷ Name or version of implementation, operating system, or hardware, respectively.

(f machine-instance) ▷ Computer name.

$\left\{ \begin{array}{l} \text{macroexpand-1} \\ \text{macroexpand} \end{array} \right\} \text{form } [\text{environment} \underline{\text{NIL}}])$
 ▷ Return macro expansion, once or entirely, respectively, of *form* and T if *form* was a macro form. Return form and NIL otherwise.

macroexpand-hook

▷ Function of arguments expansion function, macro form, and environment called by `macroexpand-1` to generate macro expansions.

$(\text{mtrace } \left\{ \begin{array}{l} \text{function} \\ (\text{setf } \text{function}) \end{array} \right\}^*)$

▷ Cause *functions* to be traced. With no arguments, return list of traced functions.

$(\text{muntrace } \left\{ \begin{array}{l} \text{function} \\ (\text{setf } \text{function}) \end{array} \right\}^*)$

▷ Stop *functions*, or each currently traced function, from being traced.

trace-output

▷ Output stream *mtrace* and *mtime* send their output to.

$(\text{mstep } \text{form})$

▷ Step through evaluation of *form*. Return values of form.

$(\text{fbreak } [\text{control } \text{arg}^*])$

▷ Jump directly into debugger; return NIL. See page 36, `format`, for *control* and *args*.

$(\text{mtime } \text{form})$

▷ Evaluate *forms* and print timing information to `*trace-output*`. Return values of form.

$(\text{inspect } \text{foo})$ ▷ Interactively give information about *foo*.

$(\text{describe } \text{foo } [\widetilde{\text{stream}} \text{v*standard-output*}])$

▷ Send information about *foo* to *stream*.

$(\text{gdescribe-object } \text{foo } [\widetilde{\text{stream}}])$

▷ Send information about *foo* to *stream*. Called by `describe`.

$(\text{fdisassemble } \text{function})$

▷ Send disassembled representation of *function* to `*standard-output*`. Return NIL.

$(\text{froom } [\text{NIL}:\text{default}[\text{T}]:\underline{\text{default}}])$

▷ Print information about internal storage management to `*standard-output*`.

15.4 Declarations

$(\text{fproclaim } \text{decl})$

$(\text{mdeclaim } \text{decl}^*)$

▷ Globally make declaration(s) *decl*. *decl* can be: **declaration**, **type**, **ftype**, **inline**, **notinline**, **optimize**, or **special**. See below.

$(\text{declare } \text{decl}^*)$

▷ Inside certain forms, locally make declarations *decl*. *decl* can be: **dynamic-extent**, **type**, **ftype**, **ignorable**, **ignore**, **inline**, **notinline**, **optimize**, or **special**. See below.

$(\text{declaration } \text{foo}^*)$

▷ Make *foos* names of declarations.

$(\text{dynamic-extent } \text{variable}^* (\text{function } \text{function})^*)$

▷ Declare lifetime of *variables* and/or *functions* to end when control leaves enclosing block.

$([\text{type}] \text{type } \text{variable}^*)$

$(\text{ftype } \text{type } \text{function}^*)$

▷ Declare *variables* or *functions* to be of *type*.

$\left(\left\{ \begin{array}{l} \text{ignorable} \\ \text{ignore} \end{array} \right\} \left\{ \begin{array}{l} \text{var} \\ (\text{function } \text{function}) \end{array} \right\}^* \right)$

▷ Suppress warnings about used/unused bindings.

$(\text{fchar-greaterp } \text{character}^+)$

$(\text{fchar-not-lessp } \text{character}^+)$

$(\text{fchar-lessp } \text{character}^+)$

$(\text{fchar-not-greaterp } \text{character}^+)$

▷ Return T if *characters* are monotonically decreasing, monotonically non-increasing, monotonically increasing, or monotonically non-decreasing, respectively, ignoring case.

$(\text{fchar-upcase } \text{character})$

$(\text{fchar-downcase } \text{character})$

▷ Return corresponding uppercase/lowercase *character*, respectively.

$(\text{fdigit-char } i [\text{radix} \underline{10}])$

▷ Character representing digit *i*.

$(\text{fchar-name } \text{char})$

▷ *char*'s name if any, or NIL.

$(\text{fname-char } \text{foo})$

▷ Character named *foo* if any, or NIL.

$(\text{fchar-int } \text{character})$

▷ Code of *character*.

$(\text{fchar-code } \text{character})$

▷ Character with *code*.

$(\text{fcode-char } \text{code})$

▷ Character with *code*.

`char-code-limit` ▷ Upper bound of $(\text{fchar-code } \text{char})$; ≥ 96 .

$(\text{fcharacter } c)$

▷ Return #\c.

3 Strings

Strings can as well be manipulated by array and sequence functions; see pages 10 and 12.

$(\text{fstringp } \text{foo})$

$(\text{fsimple-string-p } \text{foo})$ ▷ T if *foo* is of indicated type.

$\left\{ \begin{array}{l} \text{fstring=} \\ \text{fstring-equal} \end{array} \right\} \text{foo } \text{bar} \left\{ \begin{array}{l} \text{:start1 } \text{start-foo} \underline{0} \\ \text{:start2 } \text{start-bar} \underline{0} \\ \text{:end1 } \text{end-foo} \underline{\text{NIL}} \\ \text{:end2 } \text{end-bar} \underline{\text{NIL}} \end{array} \right\}$

▷ Return T if subsequences of *foo* and *bar* are equal. Obey/ignore, respectively, case.

$\left\{ \begin{array}{l} \text{fstring}\{/= \mid \text{-not-equal}\} \\ \text{fstring}\{> \mid \text{-greaterp}\} \\ \text{fstring}\{>= \mid \text{-not-lessp}\} \\ \text{fstring}\{< \mid \text{-lessp}\} \\ \text{fstring}\{<= \mid \text{-not-greaterp}\} \end{array} \right\} \text{foo } \text{bar} \left\{ \begin{array}{l} \text{:start1 } \text{start-foo} \underline{0} \\ \text{:start2 } \text{start-bar} \underline{0} \\ \text{:end1 } \text{end-foo} \underline{\text{NIL}} \\ \text{:end2 } \text{end-bar} \underline{\text{NIL}} \end{array} \right\}$

▷ If *foo* is lexicographically not equal, greater, not less, less, or not greater, respectively, then return position of first mismatching character in *foo*. Otherwise return NIL. Obey/ignore, respectively, case.

$(\text{fmake-string } \text{size} \left\{ \begin{array}{l} \text{:initial-element } \text{char} \\ \text{:element-type } \text{type} \underline{\text{character}} \end{array} \right\})$

▷ Return string of length *size*.

$(\text{fstring } x)$

$\left\{ \begin{array}{l} \text{fstring-capitalize} \\ \text{fstring-upcase} \\ \text{fstring-downcase} \end{array} \right\} x \left\{ \begin{array}{l} \text{:start } \text{start} \underline{0} \\ \text{:end } \text{end} \underline{\text{NIL}} \end{array} \right\}$

▷ Convert *x* (**symbol**, **string**, or **character**) into a string, a string with capitalized words, an all-uppercase string, or an all-lowercase string, respectively.

$\left\{ \begin{array}{l} \text{fnstring-capitalize} \\ \text{fnstring-upcase} \\ \text{fnstring-downcase} \end{array} \right\} \widetilde{\text{string}} \left\{ \begin{array}{l} \text{:start } \text{start} \underline{0} \\ \text{:end } \text{end} \underline{\text{NIL}} \end{array} \right\}$

▷ Convert *string* into a string with capitalized words, an all-uppercase string, or an all-lowercase string, respectively.

$\left\{ \begin{array}{l} \text{fstring-trim} \\ \text{fstring-left-trim} \\ \text{fstring-right-trim} \end{array} \right\} \text{char-bag } \text{string}$

▷ Return string with all characters in sequence *char-bag* removed from both ends, from the beginning, or from the end, respectively.

(*f*char *string* *i*)
 (*f*schar *string* *i*)
 ▷ Return zero-indexed *i*th character of string ignoring/obeying, respectively, fill pointer. **setfable**.

(*f*parse-integer *string* $\left\{ \begin{array}{l} \text{:start } \text{start}_{\text{[0]}} \\ \text{:end } \text{end}_{\text{[NIL]}} \\ \text{:radix } \text{int}_{\text{[10]}} \\ \text{:junk-allowed } \text{bool}_{\text{[NIL]}} \end{array} \right\}$)
 ▷ Return integer parsed from *string* and index of parse end.

4 Conses

4.1 Predicates

(*f*consp *foo*)
 (*f*listp *foo*)
 ▷ Return T if *foo* is of indicated type.

(*f*endp *list*)
 (*f*null *foo*)
 ▷ Return T if *list/foo* is NIL.

(*f*atom *foo*)
 ▷ Return T if *foo* is not a **cons**.

(*f*tailp *foo* *list*)
 ▷ Return T if *foo* is a tail of *list*.

(*f*member *foo* *list* $\left\{ \begin{array}{l} \text{:test } \text{function}_{\text{[#\text{eq}]}} \\ \text{:test-not } \text{function} \\ \text{:key } \text{function} \end{array} \right\}$)
 ▷ Return tail of list starting with its first element matching *foo*. Return NIL if there is no such element.

$\left\{ \begin{array}{l} \text{fmember-if} \\ \text{fmember-if-not} \end{array} \right\}$ *test* *list* $\text{:key } \text{function}$)
 ▷ Return tail of list starting with its first element satisfying *test*. Return NIL if there is no such element.

(*f*subsetp *list-a* *list-b* $\left\{ \begin{array}{l} \text{:test } \text{function}_{\text{[#\text{eq}]}} \\ \text{:test-not } \text{function} \\ \text{:key } \text{function} \end{array} \right\}$)
 ▷ Return T if *list-a* is a subset of *list-b*.

4.2 Lists

(*f*cons *foo* *bar*)
 ▷ Return new cons (*foo* . *bar*).

(*f*list *foo**)
 ▷ Return list of foos.

(*f*list* *foo**)
 ▷ Return list of foos with last *foo* becoming cdr of last cons. Return foo if only one *foo* given.

(*f*make-list *num* $\text{:initial-element } \text{foo}_{\text{[NIL]}}$)
 ▷ New list with *num* elements set to *foo*.

(*f*list-length *list*)
 ▷ Length of *list*; NIL for circular *list*.

(*f*car *list*)
 ▷ Car of *list* or NIL if *list* is NIL. **setfable**.

(*f*cdr *list*)
 (*f*rest *list*)
 ▷ Cdr of *list* or NIL if *list* is NIL. **setfable**.

(*f*nthcdr *n* *list*)
 ▷ Return tail of list after calling *f*cdr *n* times.

($\left\{ \text{ffirst} \mid \text{fsecond} \mid \text{fthird} \mid \text{fourth} \mid \text{fifth} \mid \text{fsixth} \mid \dots \mid \text{fninth} \mid \text{ftenth} \right\}$ *list*)
 ▷ Return nth element of list if any, or NIL otherwise. **setfable**.

(*f*nth *n* *list*)
 ▷ Zero-indexed nth element of *list*. **setfable**.

(*f*cXr *list*)
 ▷ With *X* being one to four **as** and **ds** representing *f*cars and *f*cdrs, e.g. (*f*cadr *bar*) is equivalent to (*f*car (*f*cdr *bar*)). **setfable**.

(*f*last *list* $\text{[num}_{\text{[0]}}$)
 ▷ Return list of last num conses of *list*.

$\left\{ \begin{array}{l} \text{f*compile-file} \\ \text{f*load} \end{array} \right\} \left\{ \begin{array}{l} \text{pathname*}_{\text{[NIL]}} \\ \text{truename*}_{\text{[NIL]}} \end{array} \right\}$
 ▷ Input file used by *f*compile-file/by *f*load.

$\left\{ \begin{array}{l} \text{f*compile} \\ \text{f*load} \end{array} \right\} \left\{ \begin{array}{l} \text{print*} \\ \text{verbose*} \end{array} \right\}$
 ▷ Defaults used by *f*compile-file/by *f*load.

(*s*eval-when $\left(\left\{ \begin{array}{l} \text{:compile-toplevel} \mid \text{compile} \\ \text{:load-toplevel} \mid \text{load} \\ \text{:execute} \mid \text{eval} \end{array} \right\} \right) \text{form}_{\text{[P]}}^{\text{[P]}}$)
 ▷ Return values of forms if *s*eval-when is in the top-level of a file being compiled, in the top-level of a compiled file being loaded, or anywhere, respectively. Return NIL if *forms* are not evaluated. (**compile**, **load** and **eval** deprecated.)

(*s*locally (declare $\widehat{\text{decl}}^*$)^{*} *form*_[P])
 ▷ Evaluate *forms* in a lexical environment with declarations *decl* in effect. Return values of forms.

(*m*with-compilation-unit ($\text{:override } \text{bool}_{\text{[NIL]}}$) *form*_[P])
 ▷ Return values of forms. Warnings deferred by the compiler until end of compilation are deferred until the end of evaluation of *forms*.

(*s*load-time-value *form* $\widehat{\text{read-only}}_{\text{[NIL]}}$)
 ▷ Evaluate *form* at compile time and treat its value as literal at run time.

(*s*quote $\widehat{\text{foo}}$)
 ▷ Return unevaluated foo.

(*g*make-load-form *foo* [environment])
 ▷ Its methods are to return a creation form which on evaluation at *f*load time returns an object equivalent to *foo*, and an optional initialization form which on evaluation performs some initialization of the object.

(*f*make-load-form-saving-slots *foo* $\left\{ \begin{array}{l} \text{:slot-names } \text{slots}_{\text{[all local slots]}} \\ \text{:environment } \text{environment} \end{array} \right\}$)
 ▷ Return a creation form and an initialization form which on evaluation construct an object equivalent to *foo* with *slots* initialized with the corresponding values from *foo*.

(*f*macro-function *symbol* [environment])
 (*f*compiler-macro-function $\left\{ \begin{array}{l} \text{name} \\ \text{(setf name)} \end{array} \right\}$ [environment])
 ▷ Return specified macro function, or compiler macro function, respectively, if any. Return NIL otherwise. **setfable**.

(*f*eval *arg*)
 ▷ Return values of value of arg evaluated in global environment.

15.3 REPL and Debugging

$\begin{array}{c} \vee + \mid \vee + + \mid \vee + + + \\ \vee * \mid \vee ** \mid \vee *** \\ \vee / \mid \vee // \mid \vee /// \end{array}$
 ▷ Last, penultimate, or antepenultimate form evaluated in the REPL, or their respective primary value, or a list of their respective values.

$\sqrt{}$ ▷ Form currently being evaluated by the REPL.

(*f*apropos *string* $\text{[package}_{\text{[NIL]}}$)
 ▷ Print interned symbols containing *string*.

(*f*apropos-list *string* $\text{[package}_{\text{[NIL]}}$)
 ▷ List of interned symbols containing *string*.

(*f*dribble [path])
 ▷ Save a record of interactive session to file at *path*. Without *path*, close that file.

(*f*ed $\text{[file-or-function}_{\text{[NIL]}}$)
 ▷ Invoke editor if possible.

(*symbol-name* *symbol*)
 (*symbol-package* *symbol*)
 (*symbol-plist* *symbol*)
 (*symbol-value* *symbol*)
 (*symbol-function* *symbol*)
 ▷ Name, package, property list, value, or function, respectively, of *symbol*. **setfable**.

$\left\{ \begin{array}{l} \text{documentation} \\ \text{(setf documentation) new-doc} \end{array} \right\} \text{foo} \left\{ \begin{array}{l} \text{'variable'|'function'} \\ \text{'compiler-macro'} \\ \text{'method-combination'} \\ \text{'structure'|'type'|'setf T'} \end{array} \right\}$
 ▷ Get/set documentation string of *foo* of given type.

t
 ▷ Truth; the supertype of every type including **t**; the superclass of every class except **t**; *v*terminal-io**.

nil()
 ▷ Falsity; the empty list; the empty type, subtype of every type; *v*standard-input**; *v*standard-output**; the global environment.

14.4 Standard Packages

common-lisp|cl
 ▷ Exports the defined names of Common Lisp except for those in the **keyword** package.

common-lisp-user|cl-user
 ▷ Current package after startup; uses package **common-lisp**.

keyword
 ▷ Contains symbols which are defined to be of type **keyword**.

15 Compiler

15.1 Predicates

(*special-operator-p* *foo*) ▷ T if *foo* is a special operator.

(*compiled-function-p* *foo*)
 ▷ T if *foo* is of type **compiled-function**.

15.2 Compilation

(*compile* $\left\{ \begin{array}{l} \text{NIL definition} \\ \text{name} \\ \text{(setf name)} \end{array} \right\} \text{[definition]} \right\}$)
 ▷ Return compiled function or replace *name*'s function definition with the compiled function. Return T in case of **warnings** or **errors**, and T in case of **warnings** or **errors** excluding **style-warnings**.

(*compile-file* *file* $\left\{ \begin{array}{l} \text{:output-file out-path} \\ \text{:verbose bool} \text{[v*compile-verbose*]} \\ \text{:print bool} \text{[v*compile-print*]} \\ \text{:external-format file-format} \text{[default]} \end{array} \right\}$)
 ▷ Write compiled contents of *file* to *out-path*. Return true output path or NIL, T in case of **warnings** or **errors**, T in case of **warnings** or **errors** excluding **style-warnings**.

(*compile-file-pathname* *file* [:output-file *path*] [*other-keyargs*])
 ▷ Pathname *compile-file* writes to if invoked with the same arguments.

(*load* *path* $\left\{ \begin{array}{l} \text{:verbose bool} \text{[v*load-verbose*]} \\ \text{:print bool} \text{[v*load-print*]} \\ \text{:if-does-not-exist bool} \text{[T]} \\ \text{:external-format file-format} \text{[default]} \end{array} \right\}$)
 ▷ Load source file or compiled file into Lisp environment. Return T if successful.

$\left\{ \begin{array}{l} \text{butlast list} \\ \text{nbutlast list} \end{array} \right\} \text{[num]} \right)$ ▷ list excluding last *num* conses.

$\left\{ \begin{array}{l} \text{rplaca} \\ \text{rplacd} \end{array} \right\} \text{cons object}$
 ▷ Replace car, or cdr, respectively, of cons with *object*.

(*ldiff* *list* *foo*)
 ▷ If *foo* is a tail of *list*, return preceding part of list. Otherwise return list.

(*adjoin* *foo* *list* $\left\{ \begin{array}{l} \text{:test function} \text{[#'eq]} \\ \text{:test-not function} \\ \text{:key function} \end{array} \right\}$)
 ▷ Return list if *foo* is already member of *list*. If not, return (*cons* *foo* *list*).

(*pop* *place*)
 ▷ Set *place* to (*cdr* *place*), return (*car* *place*).

(*push* *foo* *place*) ▷ Set *place* to (*cons* *foo* *place*).

(*pushnew* *foo* *place* $\left\{ \begin{array}{l} \text{:test function} \text{[#'eq]} \\ \text{:test-not function} \\ \text{:key function} \end{array} \right\}$)
 ▷ Set *place* to (*adjoin* *foo* *place*).

(*append* [*proper-list** *foo* T])
 (*nconc* [*non-circular-list** *foo* T])
 ▷ Return concatenated list or, with only one argument, *foo*. *foo* can be of any type.

(*revappend* *list* *foo*)
 (*nreconc* *list* *foo*)
 ▷ Return concatenated list after reversing order in *list*.

$\left\{ \begin{array}{l} \text{mapcar} \\ \text{maplist} \end{array} \right\} \text{function list}^+$
 ▷ Return list of return values of *function* successively invoked with corresponding arguments, either cars or cdrs, respectively, from each *list*.

$\left\{ \begin{array}{l} \text{mapcan} \\ \text{mapcon} \end{array} \right\} \text{function list}^+$
 ▷ Return list of concatenated return values of *function* successively invoked with corresponding arguments, either cars or cdrs, respectively, from each *list*. *function* should return a list.

$\left\{ \begin{array}{l} \text{mapc} \\ \text{mapl} \end{array} \right\} \text{function list}^+$
 ▷ Return first list after successively applying *function* to corresponding arguments, either cars or cdrs, respectively, from each *list*. *function* should have some side effects.

(*copy-list* *list*) ▷ Return copy of *list* with shared elements.

4.3 Association Lists

(*pairlis* *keys* *values* [*alist* T])
 ▷ Prepend to alist an association list made from lists *keys* and *values*.

(*acons* *key* *value* *alist*)
 ▷ Return alist with a (*key* . *value*) pair added.

$\left\{ \begin{array}{l} \text{assoc} \\ \text{rassoc} \end{array} \right\} \text{foo alist} \left\{ \begin{array}{l} \text{:test test} \text{[#'eq]} \\ \text{:test-not test} \\ \text{:key function} \end{array} \right\}$
 $\left\{ \begin{array}{l} \text{assoc-if[-not]} \\ \text{rassoc-if[-not]} \end{array} \right\} \text{test alist [:key function]}$
 ▷ First cons whose car, or cdr, respectively, satisfies *test*.

(*copy-alist* *alist*) ▷ Return copy of *alist*.

4.4 Trees

- $(\text{f}\text{tree-equal } \text{foo } \text{bar } \left\{ \begin{array}{l} \text{:test } \text{test} \text{ \#eq} \\ \text{:test-not } \text{test} \end{array} \right\})$
 ▷ Return T if trees *foo* and *bar* have same shape and leaves satisfying *test*.
- $\left\{ \begin{array}{l} \text{fsubst } \text{new } \text{old } \text{tree} \\ \text{fnsbst } \text{new } \text{old } \text{tree} \end{array} \right\} \left\{ \left\{ \begin{array}{l} \text{:test } \text{function} \text{ \#eq} \\ \text{:test-not } \text{function} \end{array} \right\} \right\} \left\{ \begin{array}{l} \text{:key } \text{function} \end{array} \right\}$
 ▷ Make copy of *tree* with each subtree or leaf matching *old* replaced by *new*.
- $\left\{ \begin{array}{l} \text{fsubst-if[-not] } \text{new } \text{test } \text{tree} \\ \text{fnsbst-if[-not] } \text{new } \text{test } \text{tree} \end{array} \right\} \left\{ \begin{array}{l} \text{:key } \text{function} \end{array} \right\}$
 ▷ Make copy of *tree* with each subtree or leaf satisfying *test* replaced by *new*.
- $\left\{ \begin{array}{l} \text{fsublis } \text{association-list } \text{tree} \\ \text{fnsublis } \text{association-list } \text{tree} \end{array} \right\} \left\{ \left\{ \begin{array}{l} \text{:test } \text{function} \text{ \#eq} \\ \text{:test-not } \text{function} \end{array} \right\} \right\} \left\{ \begin{array}{l} \text{:key } \text{function} \end{array} \right\}$
 ▷ Make copy of *tree* with each subtree or leaf matching a key in *association-list* replaced by that key's value.
- $(\text{f}\text{copy-tree } \text{tree})$
 ▷ Copy of *tree* with same shape and leaves.

4.5 Sets

- $\left\{ \begin{array}{l} \text{fintersection} \\ \text{fset-difference} \\ \text{funion} \\ \text{fset-exclusive-or} \end{array} \right\} \left\{ \begin{array}{l} \text{fintersection} \\ \text{fnset-difference} \\ \text{fnunion} \\ \text{fnset-exclusive-or} \end{array} \right\} \left\{ \begin{array}{l} \text{a } \text{b} \\ \tilde{\text{a}} \text{ b} \\ \tilde{\text{a}} \tilde{\text{b}} \end{array} \right\} \left\{ \left\{ \begin{array}{l} \text{:test } \text{function} \text{ \#eq} \\ \text{:test-not } \text{function} \end{array} \right\} \right\} \left\{ \begin{array}{l} \text{:key } \text{function} \end{array} \right\}$
 ▷ Return $\underline{a \cap b}$, $\underline{a \setminus b}$, $\underline{a \cup b}$, or $\underline{a \triangle b}$, respectively, of lists *a* and *b*.

5 Arrays

5.1 Predicates

- $(\text{f}\text{arrayp } \text{foo})$
 $(\text{f}\text{vectorp } \text{foo})$
 $(\text{f}\text{simple-vector-p } \text{foo})$ ▷ T if *foo* is of indicated type.
 $(\text{f}\text{bit-vector-p } \text{foo})$
 $(\text{f}\text{simple-bit-vector-p } \text{foo})$
- $(\text{f}\text{adjustable-array-p } \text{array})$
 $(\text{f}\text{array-has-fill-pointer-p } \text{array})$
 ▷ T if *array* is adjustable/has a fill pointer, respectively.
- $(\text{f}\text{array-in-bounds-p } \text{array } [\text{subscripts}])$
 ▷ Return T if *subscripts* are in *array*'s bounds.

5.2 Array Functions

- $\left\{ \begin{array}{l} \text{fmake-array } \text{dimension-sizes } [\text{:adjustable } \text{bool} \text{ \#t}] \\ \text{fadjust-array } \text{array } \text{dimension-sizes} \end{array} \right\}$
 $\left\{ \begin{array}{l} \text{:element-type } \text{type} \text{ \#} \\ \text{:fill-pointer } \{ \text{num} \text{ bool} \} \text{ \#t} \\ \text{:initial-element } \text{obj} \\ \text{:initial-contents } \text{tree-or-array} \\ \text{:displaced-to } \text{array} \text{ \#t} [\text{:displaced-index-offset } \text{i} \text{ \#}] \end{array} \right\}$
 ▷ Return fresh, or readjust, respectively, vector or array.
- $(\text{f}\text{aref } \text{array } [\text{subscripts}])$
 ▷ Return array element pointed to by *subscripts*. **setfable**.
- $(\text{f}\text{row-major-aref } \text{array } \text{i})$
 ▷ Return ith element of *array* in row-major order. **setfable**.

- $\left\{ \begin{array}{l} \text{fintern} \\ \text{ffind-symbol} \end{array} \right\} \text{foo } [\text{package} \text{ \#package*}]$
 ▷ Intern or find, respectively, symbol *foo* in *package*. Second return value is one of :internal, :external, or :inherited (or NIL if *fintern* has created a fresh symbol).

- $(\text{f}\text{unintern } \text{symbol } [\text{package} \text{ \#package*}])$
 ▷ Remove *symbol* from *package*, return T on success.

- $\left\{ \begin{array}{l} \text{fimport} \\ \text{fshadowing-import} \end{array} \right\} \text{symbols } [\text{package} \text{ \#package*}]$
 ▷ Make *symbols* internal to *package*. Return T. In case of a name conflict signal correctable **package-error** or shadow the old symbol, respectively.

- $(\text{f}\text{shadow } \text{symbols } [\text{package} \text{ \#package*}])$
 ▷ Make *symbols* of *package* shadow any otherwise accessible, equally named symbols from other packages. Return T.

- $(\text{f}\text{package-shadowing-symbols } \text{package})$
 ▷ List of symbols of *package* that shadow any otherwise accessible, equally named symbols from other packages.

- $(\text{f}\text{export } \text{symbols } [\text{package} \text{ \#package*}])$
 ▷ Make *symbols* external to *package*. Return T.

- $(\text{f}\text{unexport } \text{symbols } [\text{package} \text{ \#package*}])$
 ▷ Revert *symbols* to internal status. Return T.

- $\left\{ \begin{array}{l} \text{m}\text{do-symbols} \\ \text{m}\text{do-external-symbols} \\ \text{m}\text{do-all-symbols} \end{array} \right\} (\widehat{\text{var}} [\text{package} \text{ \#package*} [\text{result} \text{ \#t}]])$
 $(\text{declare } \text{decl}^*)^* \left\{ \begin{array}{l} \text{tag} \\ \text{form} \end{array} \right\}^*$
 ▷ Evaluate *tagbody*-like body with *var* successively bound to every symbol from *package*, to every external symbol from *package*, or to every symbol from all registered packages, respectively. Return values of result. Implicitly, the whole form is a *block* named NIL.

- $(\text{m}\text{with-package-iterator } (\text{foo } \text{packages } [\text{:internal}|\text{:external}|\text{:inherited}]) (\text{declare } \text{decl}^*)^* \text{form}^*))$
 ▷ Return values of *forms*. In *forms*, successive invocations of (*foo*) return: T if a symbol is returned; a symbol from *packages*; accessibility (:internal, :external, or :inherited); and the package the symbol belongs to.

- $(\text{f}\text{require } \text{module } [\text{paths} \text{ \#t}])$
 ▷ If not in *v*modules**, try *paths* to load *module* from. Signal **error** if unsuccessful. Deprecated.

- $(\text{f}\text{provide } \text{module})$
 ▷ If not already there, add *module* to *v*modules**. Deprecated.

- v*modules** ▷ List of names of loaded modules.

14.3 Symbols

A **symbol** has the attributes *name*, home **package**, property list, and optionally value (of global constant or variable *name*) and function (**function**, **macro**, or special operator *name*).

- $(\text{f}\text{make-symbol } \text{name})$
 ▷ Make fresh, uninterned symbol *name*.

- $(\text{f}\text{gensym } [\text{s} \text{ \#}])$
 ▷ Return fresh, uninterned symbol *\#s* with *n* from *v*gensym-counter**. Increment *v*gensym-counter**.

- $(\text{f}\text{gentemp } [\text{prefix} \text{ \#} [\text{package} \text{ \#package*}]])$
 ▷ Intern fresh symbol in *package*. Deprecated.

- $(\text{f}\text{copy-symbol } \text{symbol } [\text{props} \text{ \#t}])$
 ▷ Return uninterned copy of *symbol*. If *props* is T, give copy the same value, function and property list.

(*f*ensure-directories-exist *path* [:verbose *bool*])
 ▷ Create parts of *path* if necessary. Second return value is *T* if something has been created.

14 Packages and Symbols

The Loop Facility provides additional means of symbol handling; see **loop**, page 21.

14.1 Predicates

(*f*symbolp *foo*)
 (*f*packagep *foo*) ▷ *T* if *foo* is of indicated type.
 (*f*keywordp *foo*)

14.2 Packages

bar|keyword:*bar* ▷ Keyword, evaluates to *bar*.

package:*symbol* ▷ Exported *symbol* of *package*.

package::*symbol* ▷ Possibly unexported *symbol* of *package*.

(*m*defpackage *foo*
 {
 (:nicknames *nick**)*
 (:documentation *string*)
 (:intern *interned-symbol*)*
 (:use *used-package*)*
 (:import-from *pkg* *imported-symbol*)*
 (:shadowing-import-from *pkg* *shd-symbol*)*
 (:shadow *shd-symbol*)*
 (:export *exported-symbol*)*
 (:size *int*)
 })
 ▷ Create or modify *package foo* with *interned-symbols*, symbols from *used-packages*, *imported-symbols*, and *shd-symbols*. Add *shd-symbols* to *foo*'s shadowing list.

(*f*make-package *foo* {
 (:nicknames (*nick**)*nil*)
 (:use (*used-package**)*c*)
 })
 ▷ Create *package foo*.

(*f*rename-package *package* *new-name* [*new-nicknames**nil*])
 ▷ Rename *package*. Return *renamed package*.

(*m*in-package *foo*) ▷ Make *package foo* current.

{
 (*f*use-package
 (*f*unuse-package}) *other-packages* [*package* *v*package**])
 ▷ Make exported symbols of *other-packages* available in *package*, or remove them from *package*, respectively. Return *T*.

(*f*package-use-list *package*)
 (*f*package-used-by-list *package*)
 ▷ List of other *packages* used by/using *package*.

(*f*delete-package *package*)
 ▷ Delete *package*. Return *T* if successful.

*v*package***common-lisp-user* ▷ The current package.

(*f*list-all-packages) ▷ List of registered packages.

(*f*package-name *package*) ▷ Name of *package*.

(*f*package-nicknames *package*) ▷ Nicknames of *package*.

(*f*find-package *name*) ▷ Package with *name* (case-sensitive).

(*f*find-all-symbols *foo*)
 ▷ List of symbols *foo* from all registered packages.

(*f*array-row-major-index *array* [*subscripts*])
 ▷ Index in row-major order of the element denoted by *subscripts*.

(*f*array-dimensions *array*)
 ▷ List containing the lengths of *array*'s dimensions.

(*f*array-dimension *array* *i*)
 ▷ Length of *i*th dimension of *array*.

(*f*array-total-size *array*) ▷ Number of elements in *array*.

(*f*array-rank *array*) ▷ Number of dimensions of *array*.

(*f*array-displacement *array*) ▷ Target array and offset.

(*f*bit *bit-array* [*subscripts*])
 (*f*sbit *simple-bit-array* [*subscripts*])
 ▷ Return *element* of *bit-array* or of *simple-bit-array*. *setf*-able.

(*f*bit-not *bit-array* [*result-bit-array**nil*])
 ▷ Return *result* of bitwise negation of *bit-array*. If *result-bit-array* is *T*, put result in *bit-array*; if it is *NIL*, make a new array for result.

{
 (*f*bit-eqv
 (*f*bit-and
 (*f*bit-andc1
 (*f*bit-andc2
 (*f*bit-nand
 (*f*bit-ior
 (*f*bit-iorc1
 (*f*bit-iorc2
 (*f*bit-xor
 (*f*bit-nor
 })
bit-array-a *bit-array-b* [*result-bit-array**nil*])

▷ Return *result* of bitwise logical operations (cf. operations of *fboole*, page 4) on *bit-array-a* and *bit-array-b*. If *result-bit-array* is *T*, put result in *bit-array-a*; if it is *NIL*, make a new array for result.

array-rank-limit ▷ Upper bound of array rank; ≥ 8 .

array-dimension-limit
 ▷ Upper bound of an array dimension; ≥ 1024 .

array-total-size-limit ▷ Upper bound of array size; ≥ 1024 .

5.3 Vector Functions

Vectors can as well be manipulated by sequence functions; see section 6.

(*f*vector *foo**) ▷ Return fresh *simple vector* of *foos*.

(*f*svref *vector* *i*) ▷ Element *i* of *simple vector*. *setf*able.

(*f*vector-push *foo* *vector*)
 ▷ Return *NIL* if *vector*'s fill pointer equals size of *vector*. Otherwise replace element of *vector* pointed to by *fill pointer* with *foo*; then increment fill pointer.

(*f*vector-push-extend *foo* *vector* [*num*])
 ▷ Replace element of *vector* pointed to by *fill pointer* with *foo*, then increment fill pointer. Extend *vector*'s size by \geq *num* if necessary.

(*f*vector-pop *vector*)
 ▷ Return *element* of *vector* its fillpointer points to after decrementation.

(*f*fill-pointer *vector*) ▷ Fill pointer of *vector*. *setf*able.

6 Sequences

6.1 Sequence Predicates

$\left\{ \begin{array}{l} \text{every} \\ \text{notevery} \end{array} \right\} \text{ test sequence}^+$

▷ Return NIL or T, respectively, as soon as *test* on any set of corresponding elements of *sequences* returns NIL.

$\left\{ \begin{array}{l} \text{some} \\ \text{notany} \end{array} \right\} \text{ test sequence}^+$

▷ Return value of *test* or NIL, respectively, as soon as *test* on any set of corresponding elements of *sequences* returns non-NIL.

$\left(\text{mismatch sequence-a sequence-b} \left\{ \begin{array}{l} \text{:from-end bool}_{\text{NIL}} \\ \left\{ \begin{array}{l} \text{:test function}_{\text{#eq}} \\ \text{:test-not function} \end{array} \right\} \\ \text{:start1 start-a}_{\text{Q}} \\ \text{:start2 start-b}_{\text{Q}} \\ \text{:end1 end-a}_{\text{NIL}} \\ \text{:end2 end-b}_{\text{NIL}} \\ \text{:key function} \end{array} \right\} \right)$

▷ Return position in *sequence-a* where *sequence-a* and *sequence-b* begin to mismatch. Return NIL if they match entirely.

6.2 Sequence Functions

$(\text{make-sequence sequence-type size} [\text{:initial-element foo}])$

▷ Make sequence of *sequence-type* with *size* elements.

$(\text{concatenate type sequence}^*)$

▷ Return concatenated sequence of *type*.

$(\text{merge sequence-a sequence-b test} [\text{:key function}_{\text{NIL}}])$

▷ Return interleaved sequence of *type*. Merged sequence will be sorted if both *sequence-a* and *sequence-b* are sorted.

$(\text{fill sequence foo} \left\{ \begin{array}{l} \text{:start start}_{\text{Q}} \\ \text{:end end}_{\text{NIL}} \end{array} \right\})$

▷ Return sequence after setting elements between *start* and *end* to *foo*.

(length sequence)

▷ Return length of *sequence* (being value of fill pointer if applicable).

$\left(\text{count foo sequence} \left\{ \begin{array}{l} \text{:from-end bool}_{\text{NIL}} \\ \left\{ \begin{array}{l} \text{:test function}_{\text{#eq}} \\ \text{:test-not function} \end{array} \right\} \\ \text{:start start}_{\text{Q}} \\ \text{:end end}_{\text{NIL}} \\ \text{:key function} \end{array} \right\} \right)$

▷ Return number of elements in *sequence* which match *foo*.

$\left\{ \begin{array}{l} \text{count-if} \\ \text{count-if-not} \end{array} \right\} \text{ test sequence} \left\{ \begin{array}{l} \text{:from-end bool}_{\text{NIL}} \\ \left\{ \begin{array}{l} \text{:start start}_{\text{Q}} \\ \text{:end end}_{\text{NIL}} \\ \text{:key function} \end{array} \right\} \end{array} \right\}$

▷ Return number of elements in *sequence* which satisfy *test*.

$(\text{elt sequence index})$

▷ Return element of *sequence* pointed to by zero-indexed *index*. setfable.

$(\text{subseq sequence start} [\text{end}_{\text{NIL}}])$

▷ Return subsequence of *sequence* between *start* and *end*. setfable.

$\left\{ \begin{array}{l} \text{sort} \\ \text{stable-sort} \end{array} \right\} \text{ sequence test} [\text{:key function}]$

▷ Return sequence sorted. Order of elements considered equal is not guaranteed/retained, respectively.

$(\text{reverse sequence})$

$(\text{nreverse sequence})$ ▷ Return sequence in reverse order.

$(\text{parse-namestring foo} [\text{host}$

$[\text{default-pathname}_{\text{v}*default-pathname-defaults*}$
 $\left\{ \begin{array}{l} \text{:start start}_{\text{Q}} \\ \text{:end end}_{\text{NIL}} \\ \text{:junk-allowed bool}_{\text{NIL}} \end{array} \right\}]])$

▷ Return pathname converted from string, *pathname*, or stream *foo*; and position where parsing stopped.

$(\text{merge-pathnames path-or-stream}$

$[\text{default-path-or-stream}_{\text{v}*default-pathname-defaults*}$
 $[\text{default-version}_{\text{newest}}]])$

▷ Return pathname made by filling in components missing in *path-or-stream* from *default-path-or-stream*.

default-pathname-defaults

▷ Pathname to use if one is needed and none supplied.

$(\text{user-homedir-pathname} [\text{host}])$

▷ User's home directory.

$(\text{enough-namestring path-or-stream}$

$[\text{root-path}_{\text{v}*default-pathname-defaults*}])$

▷ Return minimal path string that sufficiently describes the path of *path-or-stream* relative to *root-path*.

$(\text{namestring path-or-stream})$

$(\text{file-namestring path-or-stream})$

$(\text{directory-namestring path-or-stream})$

$(\text{host-namestring path-or-stream})$

▷ Return string representing full pathname; name, type, and version; directory name; or host name, respectively, of *path-or-stream*.

$(\text{translate-pathname path-or-stream wildcard-path-a}$

$\text{wildcard-path-b})$

▷ Translate the path of *path-or-stream* from *wildcard-path-a* into *wildcard-path-b*. Return new path.

$(\text{pathname path-or-stream})$

▷ Pathname of *path-or-stream*.

$(\text{logical-pathname logical-path-or-stream})$

▷ Logical pathname of *logical-path-or-stream*. Logical pathnames are represented as all-uppercase
 $"[\text{host:}][:]\{\{\text{dir}|\ast\}^+\};\}\{\text{name}|\ast\}[\cdot\{\{\text{type}|\ast\}^+\}\{\text{LISP}\}]\{\{\text{version}|\ast\}\text{newest}|\text{NEWEST}\}"]$.

$(\text{logical-pathname-translations logical-host})$

▷ List of (*from-wildcard to-wildcard*) translations for *logical-host*. setfable.

$(\text{load-logical-pathname-translations logical-host})$

▷ Load *logical-host*'s translations. Return NIL if already loaded; return T if successful.

$(\text{translate-logical-pathname path-or-stream})$

▷ Physical pathname corresponding to (possibly logical) *pathname* of *path-or-stream*.

(probe-file file)

(truename file)

▷ Canonical name of *file*. If *file* does not exist, return NIL/signal file-error, respectively.

$(\text{file-write-date file})$

▷ Time at which *file* was last written.

$(\text{file-author file})$

▷ Return name of *file* owner.

$(\text{file-length stream})$

▷ Return length of *stream*.

$(\text{rename-file foo bar})$

▷ Rename file *foo* to *bar*. Unspecified components of path *bar* default to those of *foo*. Return new pathname, old physical file name, and new physical file name.

$(\text{delete-file file})$

▷ Delete *file*. Return T.

(directory path)

▷ List of pathnames matching *path*.

(*f*close *stream* [:abort *bool*_{NIL}])
 ▷ Close *stream*. Return *T* if *stream* had been open. If :abort is *T*, delete associated file.

(*m*with-open-file (*stream path open-arg**) (declare *decl**)* *form*_{P_k})
 ▷ Use *f*open with *open-args* to temporarily create *stream* to *path*; return values of forms.

(*m*with-open-stream (*foo stream*) (declare *decl**)* *form*_{P_k})
 ▷ Evaluate *forms* with *foo* locally bound to *stream*. Return values of forms.

(*m*with-input-from-string (*foo string* $\left\{ \begin{array}{l} \text{:index } \text{index} \\ \text{:start } \text{start}_{\text{0}} \\ \text{:end } \text{end}_{\text{NIL}} \end{array} \right\}$) (declare *decl**)* *form*_{P_k})
 ▷ Evaluate *forms* with *foo* locally bound to input **string-stream** from *string*. Return values of forms; store next reading position into *index*.

(*m*with-output-to-string (*foo* $\left[\text{string}_{\text{NIL}} \text{:element-type } \text{type}_{\text{character}}} \right]$) (declare *decl**)* *form*_{P_k})
 ▷ Evaluate *forms* with *foo* locally bound to an output **string-stream**. Append output to *string* and return values of forms if *string* is given. Return string containing output otherwise.

(*f*stream-external-format *stream*)
 ▷ External file format designator.

*v**terminal-io* ▷ Bidirectional stream to user terminal.

*v**standard-input*

*v**standard-output*

*v**error-output*

▷ Standard input stream, standard output stream, or standard error output stream, respectively.

*v**debug-io*

*v**query-io*

▷ Bidirectional streams for debugging and user interaction.

13.7 Pathnames and Files

(*f*make-pathname $\left\{ \begin{array}{l} \text{:host } \{ \text{host} \text{NIL} \text{:unspecific} \} \\ \text{:device } \{ \text{device} \text{NIL} \text{:unspecific} \} \\ \text{:directory } \left\{ \begin{array}{l} \{ \text{:directory} \text{:wild} \text{NIL} \text{:unspecific} \} \\ \left\{ \begin{array}{l} \text{:absolute} \\ \text{:relative} \end{array} \right\} \left\{ \begin{array}{l} \text{:wild} \\ \text{:wild-inferiors} \\ \text{:up} \\ \text{:back} \end{array} \right\} \end{array} \right\} \\ \text{:name } \{ \text{file-name} \text{:wild} \text{NIL} \text{:unspecific} \} \\ \text{:type } \{ \text{file-type} \text{:wild} \text{NIL} \text{:unspecific} \} \\ \text{:version } \{ \text{:newest} \text{version} \text{:wild} \text{NIL} \text{:unspecific} \} \\ \text{:defaults } \text{path}_{\text{host from } \text{v*default-pathname-defaults*}} \\ \text{:case } \{ \text{:local} \text{:common} \} \text{:local} \end{array} \right\}$)

▷ Construct a logical pathname if there is a logical pathname translation for *host*, otherwise construct a physical pathname. For :case :local, leave case of components unchanged. For :case :common, leave mixed-case components unchanged; convert all-uppercase components into local customary case; do the opposite with all-lowercase components.

$\left\{ \begin{array}{l} \text{:pathname-host} \\ \text{:pathname-device} \\ \text{:pathname-directory} \\ \text{:pathname-name} \\ \text{:pathname-type} \end{array} \right\}$ *path-or-stream* [:case $\left\{ \begin{array}{l} \text{:local} \\ \text{:common} \end{array} \right\}$ *local*])

(*f*pathname-version *path-or-stream*)
 ▷ Return pathname component.

$\left\{ \begin{array}{l} \text{:find} \\ \text{:position} \end{array} \right\}$ *foo sequence* $\left\{ \begin{array}{l} \text{:from-end } \text{bool}_{\text{NIL}} \\ \left\{ \begin{array}{l} \text{:test } \text{function}_{\text{\#eq}} \\ \text{:test-not } \text{test} \end{array} \right\} \\ \text{:start } \text{start}_{\text{0}} \\ \text{:end } \text{end}_{\text{NIL}} \\ \text{:key } \text{function} \end{array} \right\}$

▷ Return first element in *sequence* which matches *foo*, or its position relative to the begin of *sequence*, respectively.

$\left\{ \begin{array}{l} \text{:find-if} \\ \text{:find-if-not} \\ \text{:position-if} \\ \text{:position-if-not} \end{array} \right\}$ *test sequence* $\left\{ \begin{array}{l} \text{:from-end } \text{bool}_{\text{NIL}} \\ \text{:start } \text{start}_{\text{0}} \\ \text{:end } \text{end}_{\text{NIL}} \\ \text{:key } \text{function} \end{array} \right\}$

▷ Return first element in *sequence* which satisfies *test*, or its position relative to the begin of *sequence*, respectively.

(*f*search *sequence-a sequence-b* $\left\{ \begin{array}{l} \text{:from-end } \text{bool}_{\text{NIL}} \\ \left\{ \begin{array}{l} \text{:test } \text{function}_{\text{\#eq}} \\ \text{:test-not } \text{function} \end{array} \right\} \\ \text{:start1 } \text{start-a}_{\text{0}} \\ \text{:start2 } \text{start-b}_{\text{0}} \\ \text{:end1 } \text{end-a}_{\text{NIL}} \\ \text{:end2 } \text{end-b}_{\text{NIL}} \\ \text{:key } \text{function} \end{array} \right\}$)

▷ Search *sequence-b* for a subsequence matching *sequence-a*. Return position in *sequence-b*, or *NIL*.

$\left\{ \begin{array}{l} \text{:remove } \text{foo } \text{sequence} \\ \text{:delete } \text{foo } \text{sequence} \end{array} \right\}$ $\left\{ \begin{array}{l} \text{:from-end } \text{bool}_{\text{NIL}} \\ \left\{ \begin{array}{l} \text{:test } \text{function}_{\text{\#eq}} \\ \text{:test-not } \text{function} \end{array} \right\} \\ \text{:start } \text{start}_{\text{0}} \\ \text{:end } \text{end}_{\text{NIL}} \\ \text{:key } \text{function} \\ \text{:count } \text{count}_{\text{NIL}} \end{array} \right\}$

▷ Make copy of sequence without elements matching *foo*.

$\left\{ \begin{array}{l} \text{:remove-if} \\ \text{:remove-if-not} \\ \text{:delete-if} \\ \text{:delete-if-not} \end{array} \right\}$ *test sequence* $\left\{ \begin{array}{l} \text{:from-end } \text{bool}_{\text{NIL}} \\ \text{:start } \text{start}_{\text{0}} \\ \text{:end } \text{end}_{\text{NIL}} \\ \text{:key } \text{function} \\ \text{:count } \text{count}_{\text{NIL}} \end{array} \right\}$

▷ Make copy of sequence with all (or *count*) elements satisfying *test* removed.

$\left\{ \begin{array}{l} \text{:remove-duplicates } \text{sequence} \\ \text{:delete-duplicates } \text{sequence} \end{array} \right\}$ $\left\{ \begin{array}{l} \text{:from-end } \text{bool}_{\text{NIL}} \\ \left\{ \begin{array}{l} \text{:test } \text{function}_{\text{\#eq}} \\ \text{:test-not } \text{function} \end{array} \right\} \\ \text{:start } \text{start}_{\text{0}} \\ \text{:end } \text{end}_{\text{NIL}} \\ \text{:key } \text{function} \end{array} \right\}$

▷ Make copy of sequence without duplicates.

$\left\{ \begin{array}{l} \text{:substitute } \text{new old } \text{sequence} \\ \text{:nsubstitute } \text{new old } \text{sequence} \end{array} \right\}$ $\left\{ \begin{array}{l} \text{:from-end } \text{bool}_{\text{NIL}} \\ \left\{ \begin{array}{l} \text{:test } \text{function}_{\text{\#eq}} \\ \text{:test-not } \text{function} \end{array} \right\} \\ \text{:start } \text{start}_{\text{0}} \\ \text{:end } \text{end}_{\text{NIL}} \\ \text{:key } \text{function} \\ \text{:count } \text{count}_{\text{NIL}} \end{array} \right\}$

▷ Make copy of sequence with all (or *count*) olds replaced by *new*.

$\left\{ \begin{array}{l} \text{:substitute-if} \\ \text{:substitute-if-not} \\ \text{:nsubstitute-if} \\ \text{:nsubstitute-if-not} \end{array} \right\}$ *new test sequence* $\left\{ \begin{array}{l} \text{:from-end } \text{bool}_{\text{NIL}} \\ \text{:start } \text{start}_{\text{0}} \\ \text{:end } \text{end}_{\text{NIL}} \\ \text{:key } \text{function} \\ \text{:count } \text{count}_{\text{NIL}} \end{array} \right\}$

▷ Make copy of sequence with all (or *count*) elements satisfying *test* replaced by *new*.

(*f* **replace** *sequence-a* *sequence-b* $\left\{ \begin{array}{l} \text{:start1 } \text{start-a}_{\boxed{0}} \\ \text{:start2 } \text{start-b}_{\boxed{0}} \\ \text{:end1 } \text{end-a}_{\boxed{\text{NIL}}} \\ \text{:end2 } \text{end-b}_{\boxed{\text{NIL}}} \end{array} \right\}$)

▷ Replace elements of *sequence-a* with elements of *sequence-b*.

(*f* **map** *type* *function* *sequence*⁺)

▷ Apply *function* successively to corresponding elements of the *sequences*. Return values as a *sequence* of *type*. If *type* is NIL, return NIL.

(*f* **map-into** *result-sequence* *function* *sequence*^{*})

▷ Store into *result-sequence* successively values of *function* applied to corresponding elements of the *sequences*.

(*f* **reduce** *function* *sequence* $\left\{ \begin{array}{l} \text{:initial-value } \text{foo}_{\boxed{\text{NIL}}} \\ \text{:from-end } \text{bool}_{\boxed{\text{NIL}}} \\ \text{:start } \text{start}_{\boxed{0}} \\ \text{:end } \text{end}_{\boxed{\text{NIL}}} \\ \text{:key } \text{function} \end{array} \right\}$)

▷ Starting with the first two elements of *sequence*, apply *function* successively to its last return value together with the next element of *sequence*. Return last value of function.

(*f* **copy-seq** *sequence*)

▷ Copy of *sequence* with shared elements.

7 Hash Tables

The Loop Facility provides additional hash table-related functionality; see **loop**, page 21.

Key-value storage similar to hash tables can as well be achieved using association lists and property lists; see pages 9 and 16.

(*f* **hash-table-p** *foo*) ▷ Return T if *foo* is of type **hash-table**.

(*f* **make-hash-table** $\left\{ \begin{array}{l} \text{:test } \{ \text{f eq} | \text{f eql} | \text{f equal} | \text{f equalp} \}_{\boxed{\text{\#eq}}} \\ \text{:size } \text{int} \\ \text{:rehash-size } \text{num} \\ \text{:rehash-threshold } \text{num} \end{array} \right\}$)

▷ Make a hash table.

(*f* **gethash** *key* *hash-table* [*default*_{NIL}])

▷ Return object with *key* if any or *default* otherwise; and T if found, NIL otherwise. **setf**able.

(*f* **hash-table-count** *hash-table*)

▷ Number of entries in *hash-table*.

(*f* **remhash** *key* *hash-table*)

▷ Remove from *hash-table* entry with *key* and return T if it existed. Return NIL otherwise.

(*f* **clrhash** *hash-table*) ▷ Empty *hash-table*.

(*f* **maphash** *function* *hash-table*)

▷ Iterate over *hash-table* calling *function* on key and value. Return NIL.

(*m* **with-hash-table-iterator** (*foo* *hash-table*) (*declare* *decl*^{*})^{*} *form*^P)

▷ Return values of *forms*. In *forms*, invocations of (*foo*) return: T if an entry is returned; its key; its value.

(*f* **hash-table-test** *hash-table*)

▷ Test function used in *hash-table*.

(*f* **hash-table-size** *hash-table*)
(*f* **hash-table-rehash-size** *hash-table*)
(*f* **hash-table-rehash-threshold** *hash-table*)

▷ Current size, rehash-size, or rehash-threshold, respectively, as used in *f* **make-hash-table**.

(*f* **sxhash** *foo*)

▷ Hash code unique for any argument *f* **equal** *foo*.

13.6 Streams

(*f* **open** *path* $\left\{ \begin{array}{l} \text{:direction } \left\{ \begin{array}{l} \text{:input} \\ \text{:output} \\ \text{:io} \\ \text{:probe} \end{array} \right\} \\ \text{:element-type } \left\{ \begin{array}{l} \text{:type} \\ \text{:default} \end{array} \right\} \\ \text{:if-exists } \left\{ \begin{array}{l} \text{:new-version} \\ \text{:error} \\ \text{:rename} \\ \text{:rename-and-delete} \\ \text{:overwrite} \\ \text{:append} \\ \text{:supersede} \\ \text{NIL} \end{array} \right\} \\ \text{:if-does-not-exist } \left\{ \begin{array}{l} \text{:create} \\ \text{NIL} \end{array} \right\} \\ \text{:external-format } \text{format}_{\boxed{\text{default}}} \end{array} \right\}$

▷ Open file-stream to *path*.

(*f* **make-concatenated-stream** *input-stream*^{*})
(*f* **make-broadcast-stream** *output-stream*^{*})
(*f* **make-two-way-stream** *input-stream-part* *output-stream-part*)
(*f* **make-echo-stream** *from-input-stream* *to-output-stream*)
(*f* **make-synonym-stream** *variable-bound-to-stream*)

▷ Return stream of indicated type.

(*f* **make-string-input-stream** *string* [*start*₀ [*end*_{NIL}]])

▷ Return a string-stream supplying the characters from *string*.

(*f* **make-string-output-stream** [*element-type* *type*_{character}])

▷ Return a string-stream accepting characters (available via *f* **get-output-stream-string**).

(*f* **concatenated-stream-streams** *concatenated-stream*)
(*f* **broadcast-stream-streams** *broadcast-stream*)

▷ Return list of streams *concatenated-stream* still has to read from/*broadcast-stream* is broadcasting to.

(*f* **two-way-stream-input-stream** *two-way-stream*)
(*f* **two-way-stream-output-stream** *two-way-stream*)
(*f* **echo-stream-input-stream** *echo-stream*)
(*f* **echo-stream-output-stream** *echo-stream*)

▷ Return source stream or sink stream of *two-way-stream*/*echo-stream*, respectively.

(*f* **synonym-stream-symbol** *synonym-stream*)

▷ Return symbol of *synonym-stream*.

(*f* **get-output-stream-string** *string-stream*)

▷ Clear and return as a string characters on *string-stream*.

(*f* **file-position** *stream* $\left\{ \begin{array}{l} \text{:start} \\ \text{:end} \\ \text{:position} \end{array} \right\}$)

▷ Return position within *stream*, or set it to *position* and return T on success.

(*f* **file-string-length** *stream* *foo*)

▷ Length *foo* would have in *stream*.

(*f* **listen** [*stream*_{standard-input*}])

▷ T if there is a character in input *stream*.

(*f* **clear-input** [*stream*_{standard-input*}])

▷ Clear input from *stream*, return NIL.

$\left\{ \begin{array}{l} \text{f clear-output} \\ \text{f force-output} \\ \text{f finish-output} \end{array} \right\}$ [*stream*_{standard-output*}])

▷ End output to *stream* and return NIL immediately, after initiating flushing of buffers, or after flushing of buffers, respectively.

- ~>
 ▷ **Justification.** Justify text produced by *texts* in a field of at least *min-col* columns. With **:**, right justify; with **@**, left justify. If this would leave less than *spare* characters on the current line, output *nl-text* first.
- ~ [:] [**@**] < { [prefix ~:] [per-line-prefix ~@;] } body [-; suffix ~:] ~: [**@**] >
 ▷ **Logical Block.** Act like **pprint-logical-block** using *body* as *format* control string on the elements of the list argument or, with **@**, on the remaining arguments, which are extracted by **pprint-pop**. With **:**, *prefix* and *suffix* default to (and). When closed by ~@>, spaces in *body* are replaced with conditional newlines.
- {~ [n@] i|~ [n@] :i}
 ▷ **Indent.** Set indentation to *n* relative to leftmost/to current position.
- ~ [c@] [,i@] [:] [**@**] T
 ▷ **Tabulate.** Move cursor forward to column number *c+ki*, *k* ≥ 0 being as small as possible. With **:**, calculate column numbers relative to the immediately enclosing section. With **@**, move to column number *c₀ + c + ki* where *c₀* is the current position.
- {~ [m@] *|~ [m@] :*|~ [n@] @*}
 ▷ **Go-To.** Jump *m* arguments forward, or backward, or to argument *n*.
- ~ [limit] [:] [**@**] { text ~}
 ▷ **Iteration.** Use *text* repeatedly, up to *limit*, as control string for the elements of the list argument or (with **@**) for the remaining arguments. With **:** or **@**, list elements or remaining arguments should be lists of which a new one is used at each iteration step.
- ~ [x [y [z]]] ^
 ▷ **Escape Upward.** Leave immediately ~< ~>, ~< ~:>, ~{ ~}, ~?, or the entire *format* operation. With one to three prefixes, act only if *x* = 0, *x* = *y*, or *x* ≤ *y* ≤ *z*, respectively.
- ~ [i] [:] [**@**] [{text ~;} * text] [-; default] ~]
 ▷ **Conditional Expression.** Use the zero-indexed argument (or *i*th if given) *text* as a *format* control subclause. With **:**, use the first *text* if the argument value is NIL, or the second *text* if it is T. With **@**, do nothing for an argument value of NIL. Use the only *text* and leave the argument to be read again if it is T.
- {~?|~@?}
 ▷ **Recursive Processing.** Process two arguments as control string and argument list, or take one argument as control string and use then the rest of the original arguments.
- ~ [prefix {,prefix}*] [:] [**@**] / [package [:] :cl-user] function/
 ▷ **Call Function.** Call all-uppercase *package::function* with the arguments *stream*, *format-argument*, *colon-p*, *at-sign-p* and *prefixes* for printing *format-argument*.
- ~ [:] [**@**] W
 ▷ **Write.** Print argument of any type obeying every printer control variable. With **:**, pretty-print. With **@**, print without limits on length or depth.
- {V|#}
 ▷ In place of the comma-separated prefix parameters: use next argument or number of remaining unprocessed arguments, respectively.

8 Structures

```
(mdefstruct
  foo
  {
    (:conc-name
     (conc-name [slot-prefix foo-]))
    (:constructor
     (constructor [maker MAKE-foo] [(ord-λ*)]))
    (:copier
     (copier [copier COPY-foo]))
    (foo
     (:include struct
      {
        (slot
         (slot [init
          {
            (:type slot-type)
            (:read-only b)
          }]))
        (:type
         {
           list
           vector
           (vector type)
         })
        {
          (:named
           (:initial-offset n))
          (:print-object [o-printer])
          (:print-function [f-printer])
          (:predicate
           (predicate [p-name foo-p]))
        }
      }
     )
    (doc
     (slot
      (slot [init
       {
         (:type slot-type)
         (:read-only bool)
       }]))
     )
  }
)
```

▷ Define structure *foo* together with functions *MAKE-foo*, *COPY-foo* and *foo-P*; and **settable** accessors *foo-slot*. Instances are of class *foo* or, if **defstruct** option **:type** is given, of the specified type. They can be created by (*MAKE-foo* {*slot value*}) or, if *ord-λ* (see page 17) is given, by (*maker arg** {*key value*}). In the latter case, *args* and *keys* correspond to the positional and keyword parameters defined in *ord-λ* whose *vars* in turn correspond to *slots*. **:print-object**/**:print-function** generate a **gprint-object** method for an instance *bar* of *foo* calling (*o-printer bar stream*) or (*f-printer bar stream print-level*), respectively. If **:type** without **:named** is given, no *foo-P* is created.

(fcopy-structure structure)

▷ Return copy of *structure* with shared slot values.

9 Control Structure

9.1 Predicates

(feq foo bar) ▷ T if *foo* and *bar* are identical.

(feql foo bar)
 ▷ T if *foo* and *bar* are identical, or the same **character**, or are **conses** with *fequal* cars and cdrs, or are **strings** or **bit-vectors** with *feql* elements below their fill pointers.

(fequal foo bar)
 ▷ T if *foo* and *bar* are *feql*, or are equivalent **pathnames**, or are **conses** with *fequalp* cars and cdrs, or are **strings** or **bit-vectors** with *feql* elements below their fill pointers.

(fequalp foo bar)
 ▷ T if *foo* and *bar* are identical; or are the same **character** ignoring case; or are **numbers** of the same value ignoring type; or are equivalent **pathnames**; or are **conses** or **arrays** of the same shape with *fequalp* elements; or are structures of the same type with *fequalp* elements; or are **hash-tables** of the same size with the same **:test** function, the same keys in terms of **:test** function, and *fequalp* elements.

(fnot foo) ▷ T if *foo* is NIL; NIL otherwise.

(fboundp symbol) ▷ T if *symbol* is a special variable.

(fconstantp foo [environment nil])
 ▷ T if *foo* is a constant form.

(ffunctionp foo) ▷ T if *foo* is of type **function**.

(*f*fboundp {*foo*})
 ▷ *T* if *foo* is a global function or macro.

9.2 Variables

{*m*defconstant
*m*defparameter} *foo* *form* [*doc*])
 ▷ Assign value of *form* to global constant/dynamic variable *foo*.

(*m*defvar *foo* [*form* [*doc*]])
 ▷ Unless bound already, assign value of *form* to dynamic variable *foo*.

{*m*setf
*m*psetf} {*place form*}*
 ▷ Set *places* to primary values of *forms*. Return values of last *form*/NIL; work sequentially/in parallel, respectively.

{*s*setq
*m*psetq} {*symbol form*}*
 ▷ Set *symbols* to primary values of *forms*. Return value of last *form*/NIL; work sequentially/in parallel, respectively.

(*f*set *symbol* *foo*)
 ▷ Set *symbol*'s value cell to *foo*. Deprecated.

(*m*multiple-value-setq *vars form*)
 ▷ Set elements of *vars* to the values of *form*. Return *form*'s primary value.

(*m*shiftf *place*⁺ *foo*)
 ▷ Store value of *foo* in rightmost *place* shifting values of *places* left, returning first *place*.

(*m*rotatef *place**)
 ▷ Rotate values of *places* left, old first becoming new last *place*'s value. Return NIL.

(*f*makunbound *foo*) ▷ Delete special variable *foo* if any.

(*f*get *symbol* *key* [*default*_{NIL}])
 (*f*getf *place* *key* [*default*_{NIL}])
 ▷ First entry *key* from property list stored in *symbol*/in *place*, respectively, or *default* if there is no *key*. setfable.

(*f*get-properties *property-list* *keys*)
 ▷ Return key and value of first entry from *property-list* matching a key from *keys*, and tail of *property-list* starting with that key. Return NIL, NIL, and NIL if there was no matching key in *property-list*.

(*f*remprop *symbol* *key*)
 (*m*remf *place* *key*)
 ▷ Remove first entry *key* from property list stored in *symbol*/in *place*, respectively. Return T if *key* was there, or NIL otherwise.

(*s*progv *symbols* *values* *form*^P)
 ▷ Evaluate *forms* with locally established dynamic bindings of *symbols* to *values* or NIL. Return values of *forms*.

{*s*let
*s*let*} ({*name*
(*name* [*value*_{NIL}])})* (declare *decl**)* *form*^P*)
 ▷ Evaluate *forms* with *names* lexically bound (in parallel or sequentially, respectively) to *values*. Return values of *forms*.

(*m*multiple-value-bind (*var*^{*}) *values-form* (declare *decl**)*
body-form^P*)
 ▷ Evaluate *body-forms* with *vars* lexically bound to the return values of *values-form*. Return values of *body-forms*.

~ [*min-col*₀] [*col-inc*₀] [*min-pad*₀] [*'pad-char*₀]]
 [:] [*@*] {*A*|*S*}
 ▷ **Aesthetic/Standard**. Print argument of any type for consumption by humans/by the reader, respectively. With *:*, print NIL as () rather than nil; with *@*, add *pad-chars* on the left rather than on the right.

~ [*radix*₀] [*'width*] [*'pad-char*₀] [*'comma-char*₀] [*comma-interval*₀]] [:] [*@*] *R*
 ▷ **Radix**. (With one or more prefix arguments.) Print argument as number; with *:*, group digits *comma-interval* each; with *@*, always prepend a sign.

{~*R*|~*R*|~*OR*|~*O*:*R*}
 ▷ **Roman**. Take argument as number and print it as English cardinal number, as English ordinal number, as Roman numeral, or as old Roman numeral, respectively.

~ [*width*] [*'pad-char*₀] [*'comma-char*₀] [*comma-interval*₀]] [:] [*@*] {*D*|*B*|*O*|*X*}
 ▷ **Decimal/Binary/Octal/Hexadecimal**. Print integer argument as number. With *:*, group digits *comma-interval* each; with *@*, always prepend a sign.

~ [*width*] [*'dec-digits*] [*'shift*₀] [*'overflow-char*] [*'pad-char*₀]] [*@*] *F*
 ▷ **Fixed-Format Floating-Point**. With *@*, always prepend a sign.

~ [*width*] [*'dec-digits*] [*'exp-digits*] [*'scale-factor*₀] [*'overflow-char*] [*'pad-char*₀] [*'exp-char*]] [*@*] {*E*|*G*}
 ▷ **Exponential/General Floating-Point**. Print argument as floating-point number with *dec-digits* after decimal point and *exp-digits* in the signed exponent. With *~G*, choose either *~E* or *~F*. With *@*, always prepend a sign.

~ [*dec-digits*₀] [*'int-digits*₀] [*'width*₀] [*'pad-char*₀]] [:] [*@*] *\$*
 ▷ **Monetary Floating-Point**. Print argument as fixed-format floating-point number. With *:*, put sign before any padding; with *@*, always prepend a sign.

{~*C*|~*C*|~*@C*|~*O*:*C*}
 ▷ **Character**. Print, spell out, print in #\ syntax, or tell how to type, respectively, argument as (possibly non-printing) character.

{~(*text* ~)|~:(*text* ~)|~@(*text* ~)|~@:(*text* ~)}
 ▷ **Case-Conversion**. Convert *text* to lowercase, convert first letter of each word to uppercase, capitalize first word and convert the rest to lowercase, or convert to uppercase, respectively.

{~*P*|~*P*|~*@P*|~*O*:*P*}
 ▷ **Plural**. If argument *eq* 1 print nothing, otherwise print *s*; do the same for the previous argument; if argument *eq* 1 print *y*, otherwise print *ies*; do the same for the previous argument, respectively.

~ [*n*₀] % ▷ **Newline**. Print *n* newlines.

~ [*n*₀] &
 ▷ **Fresh-Line**. Print *n* – 1 newlines if output stream is at the beginning of a line, or *n* newlines otherwise.

{~|~:|~@|~@:|~@:~}
 ▷ **Conditional Newline**. Print a newline like *pprint-newline* with argument *:linear*, *:fill*, *:miser*, or *:mandatory*, respectively.

{~<|~<|~@<|~<~}
 ▷ **Ignored Newline**. Ignore newline, or whitespace following newline, or both, respectively.

~ [*n*₀] | ▷ **Page**. Print *n* page separators.

~ [*n*₀] ~ ▷ **Tilde**. Print *n* tildes.

~ [*min-col*₀] [*'col-inc*₀] [*'min-pad*₀] [*'pad-char*₀]] [:] [*@*] < [*nl-text* ~[*spare*₀] [*width*]]:] {*text* ~;}* *text*

(*f*pprint-newline $\left\{ \begin{array}{l} \text{:linear} \\ \text{:fill} \\ \text{:miser} \\ \text{:mandatory} \end{array} \right\}$ [*stream* *v*standard-output**])

▷ Print a conditional newline if *stream* is a pretty printing stream. Return *NIL*.

*v*print-array** ▷ If T, print arrays *f*readably.

*v*print-base**_[10] ▷ Radix for printing rationals, from 2 to 36.

*v*print-case**_[upcase]
▷ Print symbol names all uppercase (:upcase), all lowercase (:downcase), capitalized (:capitalize).

*v*print-circle**_[NIL]
▷ If T, avoid indefinite recursion while printing circular structure.

*v*print-escape**_[NIL]
▷ If NIL, do not print escape characters and package prefixes.

*v*print-gensym**_[NIL]
▷ If T, print #: before uninterned symbols.

*v*print-length**_[NIL]

*v*print-level**_[NIL]

*v*print-lines**_[NIL]
▷ If integer, restrict printing of objects to that number of elements per level/to that depth/to that number of lines.

*v*print-miser-width**
▷ If integer and greater than the width available for printing a substructure, switch to the more compact miser style.

*v*print-pretty** ▷ If T, print prettily.

*v*print-radix**_[NIL]
▷ If T, print rationals with a radix indicator.

*v*print-readably**_[NIL]
▷ If T, print *f*readably or signal error *print-not-readable*.

*v*print-right-margin**_[NIL]
▷ Right margin width in ems while pretty-printing.

(*f*set-pprint-dispatch *type function* [*priority*]
[*table* *v*print-pprint-dispatch**])
▷ Install entry comprising *function* of arguments *stream* and object to print; and *priority* as *type* into *table*. If *function* is NIL, remove *type* from *table*. Return *NIL*.

(*f*pprint-dispatch *foo* [*table* *v*print-pprint-dispatch**])
▷ Return highest priority *function* associated with type of *foo* and T if there was a matching type specifier in *table*.

(*f*copy-pprint-dispatch [*table* *v*print-pprint-dispatch**])
▷ Return copy of *table* or, if *table* is NIL, initial value of *v*print-pprint-dispatch**.

*v*print-pprint-dispatch**
▷ Current pretty print dispatch table.

13.5 Format

(*m*formatter *control*)
▷ Return *function* of *stream* and *arg** applying *f*format to *stream*, *control*, and *arg** returning NIL or any excess *args*.

(*f*format {T|NIL|out-string|out-stream} *control arg**)
▷ Output string *control* which may contain ~ directives possibly taking some *args*. Alternatively, *control* can be a function returned by *mformatter* which is then applied to *out-stream* and *arg**. Output to *out-string*, *out-stream* or, if first argument is T, to *v*standard-output**. Return *NIL*. If first argument is NIL, return *formatted output*.

(*m*destructuring-bind *destruct-λ bar* (*declare decl**)* *form^{P*}*)
▷ Evaluate *forms* with variables from tree *destruct-λ* bound to corresponding elements of tree *bar*, and return *their values*. *destruct-λ* resembles *macro-λ* (section 9.4), but without any *&environment* clause.

9.3 Functions

Below, ordinary lambda list (*ord-λ**) has the form

(*var** [*&optional* $\left\{ \begin{array}{l} \text{var} \\ \text{var} [init_{\text{NIL}} [supplied-p]] \end{array} \right\}$]*] [*&rest var*]
[*&key* $\left\{ \begin{array}{l} \text{var} \\ \text{var} [(:key var)] \end{array} \right\}$ [*init_{NIL}* [*supplied-p*]]]*]
[*&allow-other-keys*] [*&aux* $\left\{ \begin{array}{l} \text{var} \\ \text{var} [init_{\text{NIL}}] \end{array} \right\}$]*]).

supplied-p is T if there is a corresponding argument. *init* forms can refer to any *init* and *supplied-p* to their left.

$\left\{ \begin{array}{l} \text{mdefun} \left\{ \begin{array}{l} \text{foo (ord-λ*)} \\ \text{(setf foo) (new-value ord-λ*)} \end{array} \right\} (\text{declare decl}^*)^* [\widehat{doc}] \\ \text{mlambda (ord-λ*)} \end{array} \right\} \text{form}^{\text{P}^*}$
▷ Define a function named *foo* or (*setf foo*), or an anonymous function, respectively, which applies *forms* to *ord-λs*. For *mdefun*, *forms* are enclosed in an implicit *sblock* named *foo*.

$\left\{ \begin{array}{l} \text{slet} \\ \text{slabels} \end{array} \right\} ((\left\{ \begin{array}{l} \text{foo (ord-λ*)} \\ \text{(setf foo) (new-value ord-λ*)} \end{array} \right\} (\text{declare local-decl}^*)^* [\widehat{doc}] \text{local-form}^{\text{P}^*})^* (\text{declare decl}^*)^* \text{form}^{\text{P}^*})$
▷ Evaluate *forms* with locally defined functions *foo*. Globally defined functions of the same name are shadowed. Each *foo* is also the name of an implicit *sblock* around its corresponding *local-form**. Only for *slabels*, functions *foo* are visible inside *local-forms*. Return *values of forms*.

(*sfunction* $\left\{ \begin{array}{l} \text{foo} \\ \text{(mlambda form*)} \end{array} \right\}$)
▷ Return lexically innermost function named *foo* or a lexical closure of the *mlambda expression*.

(*f*apply $\left\{ \begin{array}{l} \text{function} \\ \text{(setf function)} \end{array} \right\}$ *arg* args*)
▷ Values of *function* called with *args* and the list elements of *args*. *setfable* if *function* is one of *f*aref, *f*bit, and *f*sbit.

(*f*funcall *function arg**)
▷ Values of *function* called with *args*.

(*s*multiple-value-call *function form**)
▷ Call *function* with all the values of each *form* as its arguments. Return *values returned by function*.

(*f*values-list *list*) ▷ Return *elements of list*.

(*f*values *foo**)
▷ Return as multiple values the *primary values* of the *foos*. *setfable*.

(*f*multiple-value-list *form*) ▷ List of the values of *form*.

(*m*nth-value *n form*)
▷ Zero-indexed *n*th return value of *form*.

(*f*complement *function*)
▷ Return *new function* with same arguments and same side effects as *function*, but with complementary truth value.

(*f*constantly *foo*)
▷ Function of any number of arguments returning *foo*.

(*f*identity *foo*) ▷ Return *foo*.

(*f* **function-lambda-expression** *function*)

- ▷ If available, return lambda expression of *function*, NIL if *function* was defined in an environment without bindings, and name of *function*.

(*f* **definition** $\left\{ \begin{smallmatrix} \text{foo} \\ (\text{setf } \text{foo}) \end{smallmatrix} \right\}$)

- ▷ Definition of global function *foo*. **setfable**.

(*f* **fmakunbound** *foo*)

- ▷ Remove global function or macro definition foo.

c **call-arguments-limit**

c **lambda-parameters-limit**

- ▷ Upper bound of the number of function arguments or lambda list parameters, respectively; ≥ 50 .

c **multiple-values-limit**

- ▷ Upper bound of the number of values a multiple value can have; ≥ 20 .

9.4 Macros

Below, macro lambda list (*macro-λ**) has the form of either

(*&whole* *var*) [*E*] $\left\{ \begin{smallmatrix} \text{var} \\ (\text{macro-}\lambda^*) \end{smallmatrix} \right\}^* [\text{E}]$

[*&optional* $\left\{ \begin{smallmatrix} \text{var} \\ (\text{macro-}\lambda^*) \end{smallmatrix} \right\} [\text{init}_{\text{NIL}} [\text{supplied-p}]] \}^* [\text{E}]$

[*&rest*] $\left\{ \begin{smallmatrix} \text{rest-var} \\ (\text{macro-}\lambda^*) \end{smallmatrix} \right\} [\text{E}]$

[*&body*] $\left\{ \begin{smallmatrix} \text{rest-var} \\ (\text{macro-}\lambda^*) \end{smallmatrix} \right\} [\text{E}]$

[*&key* $\left\{ \begin{smallmatrix} \text{var} \\ (\text{key } \left\{ \begin{smallmatrix} \text{var} \\ (\text{macro-}\lambda^*) \end{smallmatrix} \right\}) \end{smallmatrix} \right\} [\text{init}_{\text{NIL}} [\text{supplied-p}]] \}^* [\text{E}]$

[*&allow-other-keys*] [*&aux* $\left\{ \begin{smallmatrix} \text{var} \\ (\text{var } [\text{init}_{\text{NIL}}]) \end{smallmatrix} \right\}^* [\text{E}]$)

or

(*&whole* *var*) [*E*] $\left\{ \begin{smallmatrix} \text{var} \\ (\text{macro-}\lambda^*) \end{smallmatrix} \right\}^* [\text{E}] [\text{&optional}$

One toplevel [*E*] may be replaced by **&environment** *var*. *supplied-p* is T if there is a corresponding argument. *init* forms can refer to any *init* and *supplied-p* to their left.

(*m* **defmacro** $\left\{ \begin{smallmatrix} \text{foo} \\ (\text{define-compiler-macro}) \end{smallmatrix} \right\} (\text{macro-}\lambda^*) (\text{declare}$

- $\widehat{\text{decl}}^*)^* [\text{doc}] \text{form}^{\text{P}_k}$)
- ▷ Define macro *foo* which on evaluation as (*foo tree*) applies expanded *forms* to arguments from *tree*, which corresponds to *tree-shaped macro-λs*. *forms* are enclosed in an implicit **sblock** named *foo*.

(*m* **define-symbol-macro** *foo* *form*)

- ▷ Define symbol macro *foo* which on evaluation evaluates expanded *form*.

(*s* **macrolet** ((*foo* (*macro-λ**) (**declare** $\widehat{\text{local-decl}}^*)^* [\text{doc}]$

- $\text{macro-form}^{\text{P}_k})^* (\text{declare } \widehat{\text{decl}}^*)^* \text{form}^{\text{P}_k}$)
- ▷ Evaluate *forms* with locally defined mutually invisible macros *foo* which are enclosed in implicit **sblocks** of the same name.

(*s* **symbol-macrolet** ((*foo* *expansion-form*)*) (**declare** $\widehat{\text{decl}}^*)^* \text{form}^{\text{P}_k}$)

- ▷ Evaluate *forms* with locally defined symbol macros *foo*.

(*m* **defsetf** *function*

- $\left\{ \begin{smallmatrix} \text{updater} [\text{doc}] \\ (\text{setf-}\lambda^*) (\text{s-var}^*) (\text{declare } \widehat{\text{decl}}^*)^* [\text{doc}] \text{form}^{\text{P}_k} \end{smallmatrix} \right\}$
- where *defsetf* lambda list (*setf-λ**) has the form (*var**

(*f* **write-char** *char* [*stream* [*v***standard-output**]])

- ▷ Output *char* to *stream*.

$\left\{ \begin{smallmatrix} \text{fwrite-string} \\ \text{fwrite-line} \end{smallmatrix} \right\} \text{string} [\text{stream} [\text{stream} [\text{v}* \text{standard-output}*] [\left\{ \begin{smallmatrix} \text{:start } \text{start}_{\text{NIL}} \\ \text{:end } \text{end}_{\text{NIL}} \end{smallmatrix} \right\}]]]$

- ▷ Write *string* to *stream* without/with a trailing newline.

(*f* **write-byte** *byte* *stream*)

- ▷ Write *byte* to binary *stream*.

(*f* **write-sequence** *sequence* *stream* $\left\{ \begin{smallmatrix} \text{:start } \text{start}_{\text{NIL}} \\ \text{:end } \text{end}_{\text{NIL}} \end{smallmatrix} \right\}$)

- ▷ Write elements of *sequence* to binary or character *stream*.

$\left\{ \begin{smallmatrix} \text{fwrite} \\ \text{fwrite-to-string} \end{smallmatrix} \right\} \text{foo} \left\{ \begin{smallmatrix} \text{:array } \text{bool} \\ \text{:base } \text{radix} \\ \text{:case } \left\{ \begin{smallmatrix} \text{:upcase} \\ \text{:downcase} \\ \text{:capitalize} \end{smallmatrix} \right\} \\ \text{:circle } \text{bool} \\ \text{:escape } \text{bool} \\ \text{:gensym } \text{bool} \\ \text{:length } \left\{ \begin{smallmatrix} \text{int} \\ \text{NIL} \end{smallmatrix} \right\} \\ \text{:level } \left\{ \begin{smallmatrix} \text{int} \\ \text{NIL} \end{smallmatrix} \right\} \\ \text{:lines } \left\{ \begin{smallmatrix} \text{int} \\ \text{NIL} \end{smallmatrix} \right\} \\ \text{:miser-width } \left\{ \begin{smallmatrix} \text{int} \\ \text{NIL} \end{smallmatrix} \right\} \\ \text{:pprint-dispatch } \text{dispatch-table} \\ \text{:pretty } \text{bool} \\ \text{:radix } \text{bool} \\ \text{:readably } \text{bool} \\ \text{:right-margin } \left\{ \begin{smallmatrix} \text{int} \\ \text{NIL} \end{smallmatrix} \right\} \\ \text{:stream } \text{stream} [\text{stream} [\text{v}* \text{standard-output}*]] \end{smallmatrix} \right\}$

- ▷ Print *foo* to *stream* and return *foo*, or print *foo* into *string*, respectively, after dynamically setting printer variables corresponding to keyword parameters (***print-bar*** becoming *bar*). (**:stream** keyword with *fwrite* only.)

(*f* **pprint-fill** *stream* *foo* [*parenthesis*_{NIL}] [*noop*])

(*f* **pprint-tabular** *stream* *foo* [*parenthesis*_{NIL}] [*noop*] [*n*_{tab}])

(*f* **pprint-linear** *stream* *foo* [*parenthesis*_{NIL}] [*noop*])

- ▷ Print *foo* to *stream*. If *foo* is a list, print as many elements per line as possible; do the same in a table with a column width of *n* ems; or print either all elements on one line or each on its own line, respectively. Return NIL. Usable with *f* **format** directive *~//*.

(*m* **pprint-logical-block** (*stream* *list* $\left\{ \begin{smallmatrix} \text{:prefix } \text{string} \\ \text{:per-line-prefix } \text{string} \\ \text{:suffix } \text{string}_{\text{NIL}} \end{smallmatrix} \right\}$)

(**declare** $\widehat{\text{decl}}^*)^* \text{form}^{\text{P}_k}$)

- ▷ Evaluate *forms*, which should print *list*, with *stream* locally bound to a pretty printing stream which outputs to the original *stream*. If *list* is in fact not a list, it is printed by *fwrite*. Return NIL.

(*m* **pprint-pop**)

- ▷ Take *next element* off *list*. If there is no remaining tail of *list*, or *v****print-length*** or *v****print-circle*** indicate printing should end, send element together with an appropriate indicator to *stream*.

(*f* **pprint-tab** $\left\{ \begin{smallmatrix} \text{:line} \\ \text{:line-relative} \\ \text{:section} \\ \text{:section-relative} \end{smallmatrix} \right\} c i$

[*stream* [*v***standard-output**]])

- ▷ Move cursor forward to column number $c + ki$, $k \geq 0$ being as small as possible.

(*f* **pprint-indent** $\left\{ \begin{smallmatrix} \text{:block} \\ \text{:current} \end{smallmatrix} \right\} n [\text{stream} [\text{stream} [\text{v}* \text{standard-output}*]]]$

- ▷ Specify indentation for innermost logical block relative to leftmost position/to current position. Return NIL.

(*m* **pprint-exit-if-list-exhausted**)

- ▷ If *list* is empty, terminate logical block. Return NIL otherwise.

n/d \triangleright The **ratio** $\frac{n}{d}$.

$\{[m].n[\{S|F|D|L|E\}x_{\text{EQ}}]|m[.n]\{S|F|D|L|E\}x\}$
 $\triangleright m.n \cdot 10^x$ as **short-float**, **single-float**, **double-float**, **long-float**, or the type from ***read-default-float-format***.

#C($a\ b$) \triangleright ($\text{complex } a\ b$), the complex number $a + bi$.

#'foo \triangleright ($\text{function } foo$); the function named *foo*.

#nAsequence \triangleright n -dimensional array.

#n[foo*]
 \triangleright Vector of some (or n) *foos* filled with last *foo* if necessary.

#n[*b*]
 \triangleright Bit vector of some (or n) *bs* filled with last *b* if necessary.

#S(*type* {*slot value*}*) \triangleright Structure of *type*.

#Pstring \triangleright A pathname.

#:foo \triangleright Uninterned symbol *foo*.

#.form \triangleright Read-time value of *form*.

✓read-eval*_⌈ \triangleright If NIL, a **reader-error** is signalled at **#.**

#integer= foo \triangleright Give *foo* the label *integer*.

#integer# \triangleright Object labelled *integer*.

#< \triangleright Have the reader signal **reader-error**.

#+feature when-feature

#-feature unless-feature
 \triangleright Means *when-feature* if *feature* is T; means *unless-feature* if *feature* is NIL. *feature* is a symbol from **✓features***, or (**and**|**or**| *feature**), or (**not** *feature*).

✓features*
 \triangleright List of symbols denoting implementation-dependent features.

|c*|; \c
 \triangleright Treat arbitrary character(s) *c* as alphabetic preserving case.

13.4 Printer

$\left\{ \begin{array}{l} \text{fprin1} \\ \text{fprint} \\ \text{fpprint} \\ \text{fprinc} \end{array} \right\} foo [\widetilde{stream} \text{v*standard-output*}]$

\triangleright Print *foo* to *stream* *freadably*, *freadably* between a newline and a space, *freadably* after a newline, or human-readably without any extra characters, respectively. **fprin1**, **fprint** and **fprinc** return foo.

(**fprin1-to-string** *foo*)

(**fprinc-to-string** *foo*)

\triangleright Print *foo* to string *freadably* or human-readably, respectively.

(**gprint-object** *object* stream)

\triangleright Print *object* to *stream*. Called by the Lisp printer.

(**mprint-unreadable-object** (*foo stream* $\left\{ \begin{array}{l} \text{:type } \text{bool}_{\text{NIL}} \\ \text{:identity } \text{bool}_{\text{NIL}} \end{array} \right\}$) *form*^P)

\triangleright Enclosed in **#<** and **>**, print *foo* by means of *forms* to *stream*. Return NIL.

(**fterpri** [stream v*standard-output*])

\triangleright Output a newline to *stream*. Return NIL.

(**f fresh-line**) [stream v*standard-output*]

\triangleright Output a newline to *stream* and return T unless *stream* is already at the start of a line.

[**&optional** $\left\{ \begin{array}{l} \text{var} \\ (\text{var } [\text{init}_{\text{NIL}} [\text{supplied-p}]] \end{array} \right\}^*$] [**&rest** *var*]

[**&key** $\left\{ \begin{array}{l} \text{var} \\ (\text{:key } \text{var}) \end{array} \right\} [\text{init}_{\text{NIL}} [\text{supplied-p}]] \right\}^*$

[**&allow-other-keys**] [**&environment** *var*])

\triangleright Specify how to **setf** a place accessed by *function*. **Short form:** (**setf** (*function arg**) *value-form*) is replaced by (*updater arg* value-form*); the latter must return *value-form*. **Long form:** on invocation of (**setf** (*function arg**) *value-form*), *forms* must expand into code that sets the place accessed where *setf-λ* and *s-var** describe the arguments of *function* and the value(s) to be stored, respectively; and that returns the value(s) of *s-var**. *forms* are enclosed in an implicit **sblock** named *function*.

(**mdefine-setf-expander** *function* (*macro-λ**) (**declare** decl*)* [doc] *form*^P)

\triangleright Specify how to **setf** a place accessed by *function*. On invocation of (**setf** (*function arg**) *value-form*), *form** must expand into code returning *arg-vars*, *args*, *newval-vars*, *set-form*, and *get-form* as described with **fget-setf-expansion** where the elements of macro lambda list *macro-λ** are bound to corresponding *args*. *forms* are enclosed in an implicit **sblock** named *function*.

(**fget-setf-expansion** *place* [*environment*_⌈])

\triangleright Return lists of temporary variables *arg-vars* and of corresponding *args* as given with *place*, list *newval-vars* with temporary variables corresponding to the new values, and *set-form* and *get-form* specifying in terms of *arg-vars* and *newval-vars* how to **setf** and how to read *place*.

(**mdefine-modify-macro** *foo* ([**&optional**

$\left\{ \begin{array}{l} \text{var} \\ (\text{var } [\text{init}_{\text{NIL}} [\text{supplied-p}]] \end{array} \right\}^*$] [**&rest** *var*]) *function* [doc])

\triangleright Define macro *foo* able to modify a place. On invocation of (*foo place arg**), the value of *function* applied to *place* and *args* will be stored into *place* and returned.

λlambda-list-keywords

\triangleright List of macro lambda list keywords. These are at least:

&whole *var*

\triangleright Bind *var* to the entire macro call form.

&optional *var**

\triangleright Bind *vars* to corresponding arguments if any.

{&rest|&body} *var*

\triangleright Bind *var* to a list of remaining arguments.

&key *var**

\triangleright Bind *vars* to corresponding keyword arguments.

&allow-other-keys

\triangleright Suppress keyword argument checking. Callers can do so using **:allow-other-keys** T.

&environment *var*

\triangleright Bind *var* to the lexical compilation environment.

&aux *var**

\triangleright Bind *vars* as in **slet***.

9.5 Control Flow

(**sif** *test* then [*else*_⌈])

\triangleright Return values of then if *test* returns T; return values of else otherwise.

(**mcond** (*test then*^P test*)*)

\triangleright Return the values of the first *then** whose *test* returns T; return NIL if all *tests* return NIL.

$\left\{ \begin{array}{l} \text{mwhen} \\ \text{munless} \end{array} \right\} \text{test } foo^P$

\triangleright Evaluate *foos* and return their values if *test* returns T or NIL, respectively. Return NIL otherwise.

(*m*case test ($\widehat{\left\{ \begin{smallmatrix} key^* \\ key \end{smallmatrix} \right\}}$) $\widehat{foo^*}$)^{*} [$\widehat{\left\{ \begin{smallmatrix} otherwise \\ T \end{smallmatrix} \right\}}$ $\widehat{bar^*}$]_{NIL})

▷ Return the values of the first $\widehat{foo^*}$ one of whose \widehat{keys} is **eq** test. Return values of \widehat{bars} if there is no matching \widehat{key} .

($\widehat{\left\{ \begin{smallmatrix} m \\ m \end{smallmatrix} \right\}}$ ecase test ($\widehat{\left\{ \begin{smallmatrix} key^* \\ key \end{smallmatrix} \right\}}$) $\widehat{foo^*}$)^{*})

▷ Return the values of the first $\widehat{foo^*}$ one of whose \widehat{keys} is **eq** test. Signal non-correctable/correctable **type-error** if there is no matching \widehat{key} .

(*m*and form^{*}_{NIL})

▷ Evaluate *forms* from left to right. Immediately return NIL if one *form*'s value is NIL. Return values of last *form* otherwise.

(*m*or form^{*}_{NIL})

▷ Evaluate *forms* from left to right. Immediately return primary value of first non-NIL-evaluating form, or all values if last *form* is reached. Return NIL if no *form* returns T.

(*s*progn form^{*}_{NIL})

▷ Evaluate *forms* sequentially. Return values of last *form*.

(*s*multiple-value-prog1 form-*r* form^{*})
(*m*prog1 form-*r* form^{*})
(*m*prog2 form-*a* form-*r* form^{*})

▷ Evaluate forms in order. Return values/primary value, respectively, of form-*r*.

($\widehat{\left\{ \begin{smallmatrix} m \\ m \end{smallmatrix} \right\}}$ prog ($\widehat{\left\{ \begin{smallmatrix} name \\ (name [value_{NIL}]) \end{smallmatrix} \right\}}$)^{*}) (declare $\widehat{decl^*}$)^{*} ($\widehat{\left\{ \begin{smallmatrix} tag \\ form \end{smallmatrix} \right\}}$)^{*})

▷ Evaluate **tagbody**-like body with *names* lexically bound (in parallel or sequentially, respectively) to *values*. Return NIL or explicitly *m*returned values. Implicitly, the whole form is a **sblock** named NIL.

(*s*unwind-protect protected cleanup^{*})

▷ Evaluate *protected* and then, no matter how control leaves *protected*, *cleanups*. Return values of *protected*.

(*s*block name form^{*}_{NIL})

▷ Evaluate *forms* in a lexical environment, and return their values unless interrupted by **sreturn-from**.

(*s*return-from foo [result_{NIL}])
(*m*return [result_{NIL}])

▷ Have nearest enclosing **sblock** named *foo*/named NIL, respectively, return with values of *result*.

(*s*tagbody (\widehat{tag} |form^{*})^{*})

▷ Evaluate *forms* in a lexical environment. *tags* (symbols or integers) have lexical scope and dynamic extent, and are targets for **sgo**. Return NIL.

(*s*go \widehat{tag})

▷ Within the innermost possible enclosing **sbody**, jump to a tag **feq** tag.

(*s*catch tag form^{*}_{NIL})

▷ Evaluate *forms* and return their values unless interrupted by **sthrow**.

(*s*throw tag form)

▷ Have the nearest dynamically enclosing **sbody** with a tag **feq** tag return with the values of *form*.

(*f*sleep *n*)

▷ Wait *n* seconds; return NIL.

(*f*read-sequence $\widehat{sequence}$ \widehat{stream} [:start start_{NIL}][:end end_{NIL}])

▷ Replace elements of *sequence* between *start* and *end* with elements from binary or character *stream*. Return index of *sequence*'s first unmodified element.

(*f*readtable-case readtable)_{upcase}

▷ Case sensitivity attribute (one of **:upcase**, **:downcase**, **:preserve**, **:invert**) of readtable. **settable**.

(*f*copy-readtable [from-readtable $\widehat{v*readtable^*}$] [to-readtable_{NIL}])

▷ Return copy of from-readtable.

(*f*set-syntax-from-char to-char from-char [to-readtable $\widehat{v*readtable^*}$] [from-readtable standard readtable])

▷ Copy syntax of *from-char* to *to-readtable*. Return T.

v*readtable*

▷ Current readtable.

v*read-base*₁₀

▷ Radix for reading **integers** and **ratios**.

v*read-default-float-format*_{single-float}

▷ Floating point format to use when not indicated in the number read.

v*read-suppress*_{NIL}

▷ If T, reader is syntactically more tolerant.

(*f*set-macro-character char function [non-term-p_{NIL}] [\widehat{rt} $\widehat{v*readtables}$])

▷ Make *char* a macro character associated with *function* of stream and *char*. Return T.

(*f*get-macro-character char [\widehat{rt} $\widehat{v*readtables}$])

▷ Reader macro function associated with *char*, and T if *char* is a non-terminating macro character.

(*f*make-dispatch-macro-character char [non-term-p_{NIL}] [\widehat{rt} $\widehat{v*readtables}$])

▷ Make *char* a dispatching macro character. Return T.

(*f*set-dispatch-macro-character char sub-char function [\widehat{rt} $\widehat{v*readtables}$])

▷ Make *function* of stream, *n*, *sub-char* a dispatch function of *char* followed by *n*, followed by *sub-char*. Return T.

(*f*get-dispatch-macro-character char sub-char [\widehat{rt} $\widehat{v*readtables}$])

▷ Dispatch function associated with *char* followed by *sub-char*.

13.3 Character Syntax

#| multi-line-comment* |#

; one-line-comment*

▷ Comments. There are stylistic conventions:

;;; title	▷ Short title for a block of code.
;;; intro	▷ Description before a block of code.
:: state	▷ State of program or of following code.
; explanation	▷ Regarding line on which it appears.
; continuation	

(foo^{*} [*bar*]_{NIL})

▷ List of *foos* with the terminating cdr *bar*.

"

▷ Begin and end of a string.

'foo

▷ (**squote** foo); *foo* unevaluated.

`([foo] [*bar*] [*@baz*] [*quux*] [*bing*])

▷ Backquote. **squote** *foo* and *bing*; evaluate *bar* and splice the lists *bar* and *quux* into their elements. When nested, outermost commas inside the innermost backquote expression belong to this backquote.

#\c

▷ (**fcharacter** "c"), the character *c*.

#B*n*; #O*n*; *n*.; #X*n*; #r*Rn*

▷ Integer of radix 2, 8, 10, 16, or *r*; $2 \leq r \leq 36$.

13 Input/Output

13.1 Predicates

(*f* **stream-p** *foo*)
 (*f* **pathname-p** *foo*) ▷ *T* if *foo* is of indicated type.
 (*f* **readtable-p** *foo*)

(*f* **input-stream-p** *stream*)
 (*f* **output-stream-p** *stream*)
 (*f* **interactive-stream-p** *stream*)
 (*f* **open-stream-p** *stream*)
 ▷ Return *T* if *stream* is for input, for output, interactive, or open, respectively.

(*f* **pathname-match-p** *path* *wildcard*)
 ▷ *T* if *path* matches *wildcard*.

(*f* **wild-pathname-p** *path* [{:host|:device|:directory|:name|:type|:version|NIL}])
 ▷ Return *T* if indicated component in *path* is wildcard. (NIL indicates any component.)

13.2 Reader

{*f* **y-or-n-p**
f **yes-or-no-p**} [*control* *arg**])
 ▷ Ask user a question and return *T* or *NIL* depending on their answer. See page 36, *f* **format**, for *control* and *args*.

(*m* **with-standard-io-syntax** *form*^P)
 ▷ Evaluate *forms* with standard behaviour of reader and printer. Return *values of forms*.

{*f* **read**
f **read-preserving-whitespace**} [*stream* [*v***standard-input**] [*eof-err* *T*] [*eof-val* *NIL*] [*recursive* *NIL*]]])
 ▷ Read printed representation of *object*.

(*f* **read-from-string** *string* [*eof-error* *T*] [*eof-val* *NIL*] [{:start *start*_T
 :end *end*_{NIL}
 :preserve-whitespace *bool*_{NIL}}]])
 ▷ Return *object* read from string and zero-indexed *position* of next character.

(*f* **read-delimited-list** *char* [*stream* [*v***standard-input**] [*recursive* *NIL*]])
 ▷ Continue reading until encountering *char*. Return *list* of objects read. Signal error if no *char* is found in stream.

(*f* **read-char** [*stream* [*v***standard-input**] [*eof-err* *T*] [*eof-val* *NIL*] [*recursive* *NIL*]])
 ▷ Return *next character* from *stream*.

(*f* **read-char-no-hang** [*stream* [*v***standard-input**] [*eof-error* *T*] [*eof-val* *NIL*] [*recursive* *NIL*]])
 ▷ *Next character* from *stream* or *NIL* if none is available.

(*f* **peek-char** [*mode* *NIL*] [*stream* [*v***standard-input**] [*eof-error* *T*] [*eof-val* *NIL*] [*recursive* *NIL*]])
 ▷ Next, or if *mode* is *T*, next non-whitespace *character*, or if *mode* is a character, *next instance* of it, from *stream* without removing it there.

(*f* **unread-char** *character* [*stream* [*v***standard-input**]])
 ▷ Put last *f* **read-char**ed *character* back into *stream*; return *NIL*.

(*f* **read-byte** [*stream* [*eof-err* *T*] [*eof-val* *NIL*]])
 ▷ Read *next byte* from binary *stream*.

(*f* **read-line** [*stream* [*v***standard-input**] [*eof-err* *T*] [*eof-val* *NIL*] [*recursive* *NIL*]])
 ▷ Return a *line of text* from *stream* and *T* if line has been ended by end of file.

9.6 Iteration

{*m* **do**
m **do***} {*var*
 [*start* [*step*]]})* (*stop* *result*^P) (*declare* *decl*^{*})
 {*tag*
 [*form*]})*
 ▷ Evaluate *s* **tagbody**-like body with *vars* successively bound according to the values of the corresponding *start* and *step* forms. *vars* are bound in parallel/sequentially, respectively. Stop iteration when *stop* is *T*. Return *values of result*^{*}. Implicitly, the whole form is a *s* **block** named *NIL*.

(*m* **dotimes** (*var* *i* [*result* *NIL*]) (*declare* *decl*^{*})* {*tag* [*form*]})*
 ▷ Evaluate *s* **tagbody**-like body with *var* successively bound to integers from 0 to *i* − 1. Upon evaluation of *result*, *var* is *i*. Implicitly, the whole form is a *s* **block** named *NIL*.

(*m* **dolist** (*var* *list* [*result* *NIL*]) (*declare* *decl*^{*})* {*tag* [*form*]})*
 ▷ Evaluate *s* **tagbody**-like body with *var* successively bound to the elements of *list*. Upon evaluation of *result*, *var* is *NIL*. Implicitly, the whole form is a *s* **block** named *NIL*.

9.7 Loop Facility

(*m* **loop** *form*^{*})
 ▷ **Simple Loop.** If *forms* do not contain any atomic Loop Facility keywords, evaluate them forever in an implicit *s* **block** named *NIL*.

(*m* **loop** *clause*^{*})
 ▷ **Loop Facility.** For Loop Facility keywords see below and Figure 1.

named *n*_{NIL} ▷ Give *m* **loop**'s implicit *s* **block** a name.

{**with** {*var-s*
 (*var-s*^{*})} [*d-type*] [= *foo*]}⁺
 {**and** {*var-p*
 (*var-p*^{*})} [*d-type*] [= *bar*]}^{*}
 where destructuring type specifier *d-type* has the form
 {**fixnum**|**float**|**T**|**NIL**}[**of-type** {*type*
 (*type*^{*})}]}
 ▷ Initialize (possibly trees of) local variables *var-s* sequentially and *var-p* in parallel.

{**for**|**as**} {*var-s*
 (*var-s*^{*})} [*d-type*]⁺ {**and** {*var-p*
 (*var-p*^{*})} [*d-type*]}^{*}
 ▷ Begin of iteration control clauses. Initialize and step (possibly trees of) local variables *var-s* sequentially and *var-p* in parallel. Destructuring type specifier *d-type* as with **with**.

{**upfrom**|**from**|**downfrom**} *start*
 ▷ Start stepping with *start*

{**upto**|**downto**|**to**|**below**|**above**} *form*
 ▷ Specify *form* as the end value for stepping.

{**in**|**on**} *list*
 ▷ Bind *var* to successive elements/tails, respectively, of *list*.

by {*step*_T|*function* *#cdf*}
 ▷ Specify the (positive) decrement or increment or the *function* of one argument returning the next part of the list.

= *foo* [**then** *bar* *foo*]
 ▷ Bind *var* initially to *foo* and later to *bar*.

across *vector*
 ▷ Bind *var* to successive elements of *vector*.

being {**the**|**each**}
 ▷ Iterate over a hash table or a package.

{**hash-key**|**hash-keys**} {**of**|**in**} *hash-table* [**using** (*hash-value* *value*)]
 ▷ Bind *var* successively to the keys of *hash-table*; bind *value* to corresponding values.

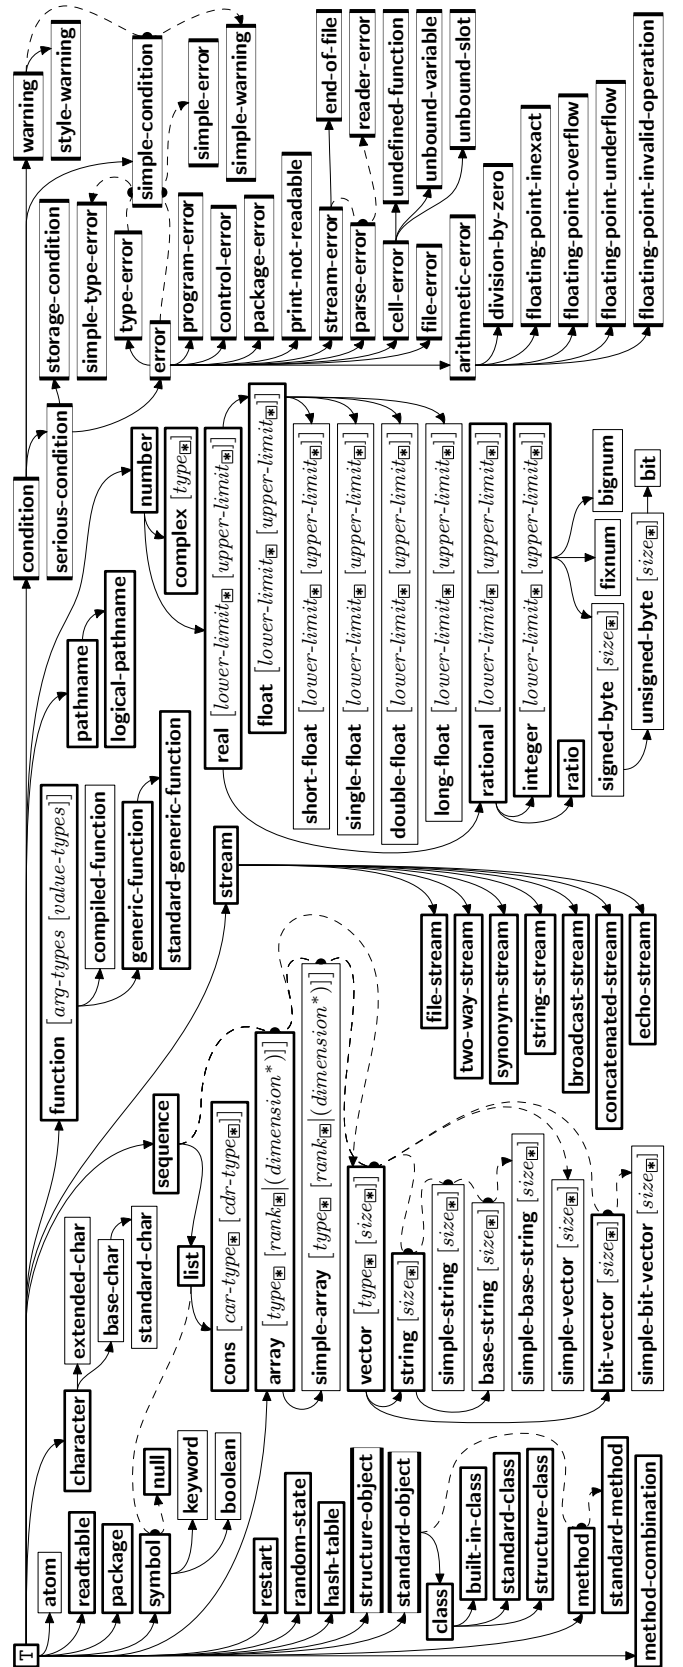

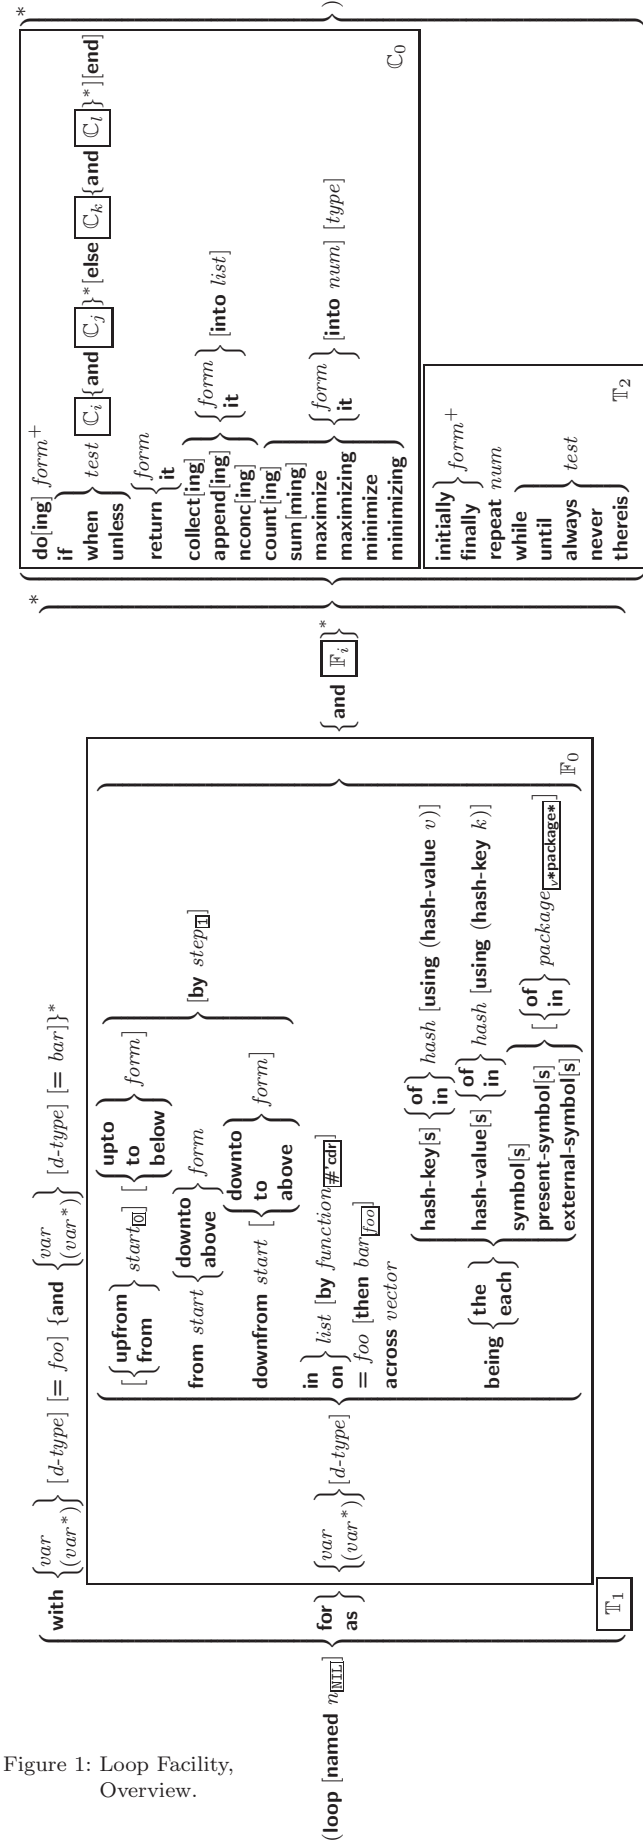

Figure 2: Precedence Order of System Classes (□), Classes (▢), Types (▣), and Condition Types (▤). Every type is also a supertype of NIL, the empty type.

debugger-hook_{NTT}

▷ Function of condition and function itself. Called before debugger.

12 Types and Classes

For any class, there is always a corresponding type of the same name.

(**f**typep *foo type* [*environment*_{NTT}]) ▷ **T** if *foo* is of *type*.

(**f**subtypep *type-a type-b* [*environment*])
▷ Return **T** if *type-a* is a recognizable subtype of *type-b*, and **NIL** if the relationship could not be determined.

(**s**the *type form*) ▷ Declare values of *form* to be of *type*.

(**f**coerce *object type*) ▷ Coerce *object* into *type*.

(**m**typecase *foo* (*type a-form*^{P_k})* [(**otherwise**) *b-form*_{NTT}])
▷ Return values of the first *a-form** whose *type* is *foo* of. Return values of *b-forms* if no *type* matches.

(**m**etypecase)
(**m**cetypecase) *foo* (*type form*^{P_k})*
▷ Return values of the first *form** whose *type* is *foo* of. Signal non-correctable/correctable **type-error** if no *type* matches.

(**f**type-of *foo*) ▷ Type of *foo*.

(**m**check-type *place type* [*string*_{[a an] type}])
▷ Signal correctable **type-error** if *place* is not of *type*. Return **NIL**.

(**f**stream-element-type *stream*) ▷ Type of *stream* objects.

(**f**array-element-type *array*) ▷ Element type *array* can hold.

(**f**upgraded-array-element-type *type* [*environment*_{NTT}])
▷ Element type of most specialized array capable of holding elements of *type*.

(**m**deftype *foo* (*macro-λ**) (**declare** *decl**)* [*doc*] *form*^{P_k})
▷ Define type *foo* which when referenced as (*foo arg**) (or as *foo* if *macro-λ* doesn't contain any required parameters) applies expanded *forms* to *args* returning the new type. For (*macro-λ**) see page 18 but with default value of * instead of **NIL**. *forms* are enclosed in an implicit **sblock** named *foo*.

(**eq** *foo*)
(**member** *foo**) ▷ Specifier for a type comprising *foo* or *foos*.

(**satisfies** *predicate*)
▷ Type specifier for all objects satisfying *predicate*.

(**mod** *n*) ▷ Type specifier for all non-negative integers < *n*.

(**not** *type*) ▷ Complement of type.

(**and** *type**_{NTT}) ▷ Type specifier for intersection of *types*.

(**or** *type**_{NTT}) ▷ Type specifier for union of *types*.

(**values** *type** [**&optional** *type** [**&rest** *other-args*]])
▷ Type specifier for multiple values.

* ▷ As a type argument (cf. Figure 2): no restriction.

{**hash-value**|**hash-values**} {**of**|**in**} *hash-table* [**using** (**hash-key** *key*)]
▷ Bind *var* successively to the values of *hash-table*; bind *key* to corresponding keys.

{**symbol**|**symbols**|**present-symbol**|**present-symbols**|**external-symbol**|**external-symbols**} {**of**|**in**}
package [***package***]
▷ Bind *var* successively to the accessible symbols, or the present symbols, or the external symbols respectively, of *package*.

{**do**|**doing**} *form*⁺
▷ Evaluate *forms* in every iteration.

{**if**|**when**|**unless**} *test i-clause* {**and** *j-clause*}* [**else** *k-clause* {**and** *l-clause*}*] [**end**]
▷ If *test* returns **T**, **T**, or **NIL**, respectively, evaluate *i-clause* and *j-clauses*; otherwise, evaluate *k-clause* and *l-clauses*.

it ▷ Inside *i-clause* or *k-clause*: value of *test*.

return {*form*|**it**}
▷ Return immediately, skipping any **finally** parts, with values of *form* or **it**.

{**collect**|**collecting**} {*form*|**it**} [**into** *list*]
▷ Collect values of *form* or **it** into *list*. If no *list* is given, collect into an anonymous list which is returned after termination.

{**append**|**appending**|**nconc**|**nconcing**} {*form*|**it**} [**into** *list*]
▷ Concatenate values of *form* or **it**, which should be lists, into *list* by the means of **fappend** or **fnconc**, respectively. If no *list* is given, collect into an anonymous list which is returned after termination.

{**count**|**counting**} {*form*|**it**} [**into** *n*] [*type*]
▷ Count the number of times the value of *form* or of **it** is **T**. If no *n* is given, count into an anonymous variable which is returned after termination.

{**sum**|**summing**} {*form*|**it**} [**into** *sum*] [*type*]
▷ Calculate the sum of the primary values of *form* or of **it**. If no *sum* is given, sum into an anonymous variable which is returned after termination.

{**maximize**|**maximizing**|**minimize**|**minimizing**} {*form*|**it**} [**into** *max-min*] [*type*]
▷ Determine the maximum or minimum, respectively, of the primary values of *form* or of **it**. If no *max-min* is given, use an anonymous variable which is returned after termination.

{**initially**|**finally**} *form*⁺
▷ Evaluate *forms* before begin, or after end, respectively, of iterations.

repeat *num*
▷ Terminate **mloop** after *num* iterations; *num* is evaluated once.

{**while**|**until**} *test*
▷ Continue iteration until *test* returns **NIL** or **T**, respectively.

{**always**|**never**} *test*
▷ Terminate **mloop** returning **NIL** and skipping any **finally** parts as soon as *test* is **NIL** or **T**, respectively. Otherwise continue **mloop** with its default return value set to **T**.

thereis *test*
▷ Terminate **mloop** when *test* is **T** and return value of *test*, skipping any **finally** parts. Otherwise continue **mloop** with its default return value set to **NIL**.

(**m**loop-finish)
▷ Terminate **mloop** immediately executing any **finally** clauses and returning any accumulated results.

10 CLOS

10.1 Classes

(*f*slot-exists-p *foo bar*) ▷ T if *foo* has a slot *bar*.

(*f*slot-boundp *instance slot*) ▷ T if *slot* in *instance* is bound.

(*m*defclass *foo* (*superclass** standard-object)

$$\left\{ \begin{array}{l} \text{slot} \\ \left\{ \begin{array}{l} \text{:reader } \text{reader}^* \\ \text{:writer } \left\{ \begin{array}{l} \text{writer} \\ \text{(setf writer)} \end{array} \right\}^* \\ \text{:accessor } \text{accessor}^* \\ \text{:allocation } \left\{ \begin{array}{l} \text{:instance} \\ \text{:class} \end{array} \right\} \text{instance} \\ \text{:initarg } \text{:initarg-name}^* \\ \text{:initform } \text{form} \\ \text{:type } \text{type} \\ \text{:documentation } \text{slot-doc} \end{array} \right\} \end{array} \right\}^*$$

$\left\{ \begin{array}{l} \text{:default-initargs } \{ \text{name value}^* \}^* \\ \text{:documentation } \text{class-doc} \\ \text{:metaclass } \text{name} \text{standard-class} \end{array} \right\}$

▷ Define or modify class *foo* as a subclass of superclasses. Transform existing instances, if any, by make-instances-obsolete. In a new instance *i* of *foo*, a *slot*'s value defaults to *form* unless set via *:initarg-name*; it is readable via (*reader i*) or (*accessor i*), and writable via (*writer value i*) or (*setf (accessor i) value*). *slots* with *:allocation :class* are shared by all instances of class *foo*.

(*f*find-class *symbol* [*errorp*NI] [*environment*])

▷ Return class named *symbol*. setfable.

(*g*make-instance *class* *{:initarg value}* other-keyarg**)

▷ Make new instance of *class*.

(*g*reinitialize-instance *instance* *{:initarg value}* other-keyarg**)

▷ Change local slots of *instance* according to *initargs* by means of *gshared-initialize*.

(*f*slot-value *foo slot*) ▷ Return value of *slot* in *foo*. setfable.

(*f*slot-makunbound *instance slot*)

▷ Make *slot* in *instance* unbound.

$\left\{ \begin{array}{l} \text{mwith-slots } (\{ \widehat{\text{slot}} | (\widehat{\text{var}} \text{ slot})^* \})^* \\ \text{mwith-accessors } ((\widehat{\text{var}} \text{ accessor})^*)^* \end{array} \right\} \text{instance (declare } \widehat{\text{decl}}^*)^*$

*form^P**

▷ Return values of forms after evaluating them in a lexical environment with slots of *instance* visible as setfable slots or *vars*/with *accessors* of *instance* visible as setfable vars.

(*g*class-name *class*)

((*setf* *g*class-name) *new-name class*) ▷ Get/set name of *class*.

(*f*class-of *foo*) ▷ Class *foo* is a direct instance of.

(*g*change-class *instance new-class* *{:initarg value}* other-keyarg**)

▷ Change class of *instance* to *new-class*. Retain the status of any slots that are common between *instance*'s original class and *new-class*. Initialize any newly added slots with the *values* of the corresponding *initargs* if any, or with the *values* of their *:initform* forms if not.

(*g*make-instances-obsolete *class*)

▷ Update all existing instances of *class* using *gupdate-instance-for-redefined-class*.

$\left\{ \begin{array}{l} \text{ginitialize-instance } \text{instance} \\ \text{gupdate-instance-for-different-class } \text{previous current} \end{array} \right\}$

{:initarg value} other-keyarg**

▷ Set slots on behalf of *gmake-instance*/of *gchange-class* by means of *gshared-initialize*.

(*m*restart-bind (($\widehat{\text{restart}}$ NIL) *restart-function*

$$\left\{ \begin{array}{l} \text{:interactive-function } \text{arg-function} \\ \text{:report-function } \text{report-function} \\ \text{:test-function } \text{test-function} \end{array} \right\}^*) \text{form}^*)$$

▷ Return values of forms evaluated with dynamically established *restarts* whose *restart-functions* should perform a non-local transfer of control. A restart is visible under *condition* if (*test-function condition*) returns T. If presented in the debugger, *restarts* are described by *restart-function* (of a stream). A *restart* can be called by (*invoke-restart restart arg**), where *args* must be suitable for the corresponding *restart-function*, or by (*invoke-restart-interactively restart*) where a list of the respective *args* is supplied by *arg-function*.

(*f*invoke-restart *restart arg**)

(*f*invoke-restart-interactively *restart*)

▷ Call function associated with *restart* with arguments given or prompted for, respectively. If *restart* function returns, return its values.

$\left\{ \begin{array}{l} \text{ffind-restart} \\ \text{fcompute-restarts } \text{name} \end{array} \right\} [\text{condition}]$

▷ Return innermost restart *name*, or a list of all restarts, respectively, out of those either associated with *condition* or un-associated at all; or, without *condition*, out of all restarts. Return NIL if search is unsuccessful.

(*f*restart-name *restart*) ▷ Name of *restart*.

$\left\{ \begin{array}{l} \text{fabort} \\ \text{fmuffle-warning} \\ \text{fcontinue} \\ \text{fstore-value } \text{value} \\ \text{fuse-value } \text{value} \end{array} \right\} [\text{condition} \text{NI}]$

▷ Transfer control to innermost applicable restart with same name (i.e. **abort**, ..., **continue** ...) out of those either associated with *condition* or un-associated at all; or, without *condition*, out of all restarts. If no restart is found, signal **control-error** for *fabort* and *fmuffle-warning*, or return NIL for the rest.

(*m*with-condition-restarts *condition restarts form^P**)

▷ Evaluate *forms* with *restarts* dynamically associated with *condition*. Return values of forms.

(*f*arithmetic-error-operation *condition*)

(*f*arithmetic-error-operands *condition*)

▷ List of function or of its operands respectively, used in the operation which caused *condition*.

(*f*cell-error-name *condition*)

▷ Name of cell which caused *condition*.

(*f*unbound-slot-instance *condition*)

▷ Instance with unbound slot which caused *condition*.

(*f*print-not-readable-object *condition*)

▷ The object not readably printable under *condition*.

(*f*package-error-package *condition*)

(*f*file-error-pathname *condition*)

(*f*stream-error-stream *condition*)

▷ Package, path, or stream, respectively, which caused the *condition* of indicated type.

(*f*type-error-datum *condition*)

(*f*type-error-expected-type *condition*)

▷ Object which caused *condition* of type **type-error**, or its expected type, respectively.

(*f*simple-condition-format-control *condition*)

(*f*simple-condition-format-arguments *condition*)

▷ Return *f***format** control or list of *f***format** arguments, respectively, of *condition*.

break-on-signalsNI

▷ Condition type debugger is to be invoked on.

(*f*make-condition *condition-type* {:*initarg-name value*}*)
 ▷ Return new instance of *condition-type*.

$\left\{ \begin{array}{l} \text{fsignal} \\ \text{fwarn} \\ \text{ferror} \end{array} \right\} \left\{ \begin{array}{l} \text{condition} \\ \text{condition-type } \{:\text{initarg-name value}\}^* \\ \text{control arg}^* \end{array} \right\}$
 ▷ Unless handled, signal as **condition**, **warning** or **error**, respectively, *condition* or a new instance of *condition-type* or, with *f*format control and args (see page 36), **simple-condition**, **simple-warning**, or **simple-error**, respectively. From *f*signal and *f*warn, return NIL.

(*f*cerror *continue-control* $\left\{ \begin{array}{l} \text{condition continue-arg}^* \\ \text{condition-type } \{:\text{initarg-name value}\}^* \\ \text{control arg}^* \end{array} \right\}$)
 ▷ Unless handled, signal as correctable **error** *condition* or a new instance of *condition-type* or, with *f*format control and args (see page 36), **simple-error**. In the debugger, use *f*format arguments *continue-control* and *continue-args* to tag the continue option. Return NIL.

(*m*ignore-errors *form*^P)
 ▷ Return values of *forms* or, in case of **errors**, NIL and the condition.

(*f*invoke-debugger *condition*)
 ▷ Invoke debugger with *condition*.

(*m*assert *test* [(*place**)
 $\left\{ \begin{array}{l} \text{condition continue-arg}^* \\ \text{condition-type } \{:\text{initarg-name value}\}^* \\ \text{control arg}^* \end{array} \right\}]]$)
 ▷ If *test*, which may depend on *places*, returns NIL, signal as correctable **error** *condition* or a new instance of *condition-type* or, with *f*format control and args (see page 36), **error**. When using the debugger's continue option, *places* can be altered before re-evaluation of *test*. Return NIL.

(*m*handler-case *foo* $(\text{type } ([\text{var}]) (\text{declare } \widehat{\text{decl}}^*)^* \text{condition-form}^{\text{P}})^*$
 $[(\text{no-error } (\text{ord-}\lambda^*) (\text{declare } \widehat{\text{decl}}^*)^* \text{form}^{\text{P}}))]$)
 ▷ If, on evaluation of *foo*, a condition of *type* is signalled, evaluate matching *condition-forms* with *var* bound to the condition, and return their values. Without a condition, bind *ord-λs* to values of *foo* and return values of *forms* or, without a **no-error** clause, return values of *foo*. See page 17 for (*ord-λ**).

(*m*handler-bind ((*condition-type* *handler-function*)*) *form*^P)
 ▷ Return values of *forms* after evaluating them with *condition-types* dynamically bound to their respective *handler-functions* of argument condition.

(*m*with-simple-restart ($\left\{ \begin{array}{l} \text{restart} \\ \text{NIL} \end{array} \right\}$ *control arg**) *form*^P)
 ▷ Return values of *forms* unless *restart* is called during their evaluation. In this case, describe *restart* using *f*format control and args (see page 36) and return NIL and T.

(*m*restart-case *form* (*restart* (*ord-λ**) $\left\{ \begin{array}{l} \text{:interactive arg-function} \\ \text{:report } \left\{ \begin{array}{l} \text{report-function} \\ \text{string } \boxed{\text{"restart"}} \end{array} \right\} \\ \text{:test test-function} \boxed{\text{m}} \end{array} \right\}$)
 $(\text{declare } \widehat{\text{decl}}^*)^* \text{restart-form}^{\text{P}})^*$)
 ▷ Return values of *form* or, if during evaluation of *form* one of the dynamically established *restarts* is called, the values of its *restart-forms*. A *restart* is visible under *condition* if (*funcall* #'*test-function* *condition*) returns T. If presented in the debugger, *restarts* are described by *string* or by #'*report-function* (of a stream). A *restart* can be called by (*invoke-restart* *restart arg**), where *args* match *ord-λ**, or by (*invoke-restart-interactively* *restart*) where a list of the respective *args* is supplied by #'*arg-function*. See page 17 for *ord-λ**.

(*g*update-instance-for-redefined-class *new-instance* *added-slots* *discarded-slots* *discarded-slots-property-list* {:*initarg value*}* *other-keyarg**)
 ▷ On behalf of *g*make-instances-obsolete and by means of *g*shared-initialize, set any *initarg* slots to their corresponding *values*; set any remaining *added-slots* to the values of their **:initform** forms. Not to be called by user.

(*g*allocate-instance *class* {:*initarg value*}* *other-keyarg**)
 ▷ Return uninitialized instance of *class*. Called by *g*make-instance.

(*g*shared-initialize *instance* $\left\{ \begin{array}{l} \text{initform-slots} \\ \text{T} \end{array} \right\}$ {:*initarg-slot value*}* *other-keyarg**)
 ▷ Fill the *initarg-slots* of *instance* with the corresponding *values*, and fill those *initform-slots* that are not *initarg-slots* with the values of their **:initform** forms.

(*g*slot-missing *class* *instance* *slot* $\left\{ \begin{array}{l} \text{self} \\ \text{slot-boundp} \\ \text{slot-makunbound} \\ \text{slot-value} \end{array} \right\}$ [*value*])

(*g*slot-unbound *class* *instance* *slot*)
 ▷ Called on attempted access to non-existing or unbound *slot*. Default methods signal **error/unbound-slot**, respectively. Not to be called by user.

10.2 Generic Functions

(*f*next-method-p)
 ▷ T if enclosing method has a next method.

(*m*defgeneric $\left\{ \begin{array}{l} \text{foo} \\ \text{(setf foo)} \end{array} \right\}$ (*required-var** [**&optional** {*var* (*var*)}*)
 $[\text{&rest var}] [\text{&key } \left\{ \begin{array}{l} \text{var} \\ (\text{var} | (:key \text{var})) \end{array} \right\}]^*$
 $[\text{&allow-other-keys}]]$)
 $\left\{ \begin{array}{l} (\text{:argument-precedence-order } \text{required-var}^+) \\ (\text{:declare } (\text{optimize } \text{method-selection-optimization})^+) \\ (\text{:documentation } \text{string}) \\ (\text{:generic-function-class } \text{gf-class } \boxed{\text{standard-generic-function}}) \\ (\text{:method-class } \text{method-class } \boxed{\text{standard-method}}) \\ (\text{:method-combination } \text{c-type } \boxed{\text{standard}} \text{ c-arg}^*) \\ (\text{:method } \text{defmethod-args})^* \end{array} \right\}$
 ▷ Define or modify generic function *foo*. Remove any methods previously defined by *defgeneric*. *gf-class* and the lambda parameters *required-var** and *var** must be compatible with existing methods. *defmethod-args* resemble those of *m*defmethod. For *c-type* see section 10.3.

(*f*ensure-generic-function $\left\{ \begin{array}{l} \text{foo} \\ \text{(setf foo)} \end{array} \right\}$
 $\left\{ \begin{array}{l} \text{:argument-precedence-order } \text{required-var}^+ \\ \text{:declare } (\text{optimize } \text{method-selection-optimization}) \\ \text{:documentation } \text{string} \\ \text{:generic-function-class } \text{gf-class} \\ \text{:method-class } \text{method-class} \\ \text{:method-combination } \text{c-type } \text{c-arg}^* \\ \text{:lambda-list } \text{lambda-list} \\ \text{:environment } \text{environment} \end{array} \right\}$)
 ▷ Define or modify generic function *foo*. *gf-class* and *lambda-list* must be compatible with a pre-existing generic function or with existing methods, respectively. Changes to *method-class* do not propagate to existing methods. For *c-type* see section 10.3.

(*m*defmethod $\left\{ \begin{array}{l} \text{foo} \\ \text{(setf foo)} \end{array} \right\}$ [$\left\{ \begin{array}{l} \text{:before} \\ \text{:after} \\ \text{:around} \\ \text{qualifier}^* \end{array} \right\}$ [*primary method*]]
 $\left\{ \begin{array}{l} \text{var} \\ (\text{spec-var } \left\{ \begin{array}{l} \text{class} \\ (\text{eq } \text{bar}) \end{array} \right\})^* \end{array} \right\}$ [**&optional**

$$\left\{ \begin{array}{l} \text{var} \\ (\text{var} [\text{init} [\text{supplied-p}]]) \end{array} \right\}^* [\&\text{rest var}] [\&\text{key} \\ \left\{ \begin{array}{l} \text{var} \\ ((\text{:key var})) \end{array} \right\} [\text{init} [\text{supplied-p}]] \right\}^* [\&\text{allow-other-keys}] \\ [\&\text{aux} \left\{ \begin{array}{l} \text{var} \\ (\text{var} [\text{init}]) \end{array} \right\}^*] \left\{ \begin{array}{l} (\text{declare } \widehat{\text{decl}}^*)^* \\ \text{doc} \end{array} \right\} \text{form}^{\text{P}_k})$$

▷ Define **new method** for generic function *foo*. *spec-vars* specialize to either being of *class* or being **eql** *bar*, respectively. On invocation, *vars* and *spec-vars* of the **new method** act like parameters of a function with body *form*^{*}. *forms* are enclosed in an implicit **block** *foo*. Applicable *qualifiers* depend on the **method-combination** type; see section 10.3.

$$\left\{ \begin{array}{l} \text{gadd-method} \\ \text{gremove-method} \end{array} \right\} \text{generic-function method}$$

▷ Add (if necessary) or remove (if any) *method* to/from *generic-function*.

$$(\text{gfind-method } \text{generic-function } \text{qualifiers } \text{specializers } [\text{error}])$$

▷ Return suitable *method*, or signal **error**.

$$(\text{gcompute-applicable-methods } \text{generic-function } \text{args})$$

▷ List of *methods* suitable for *args*, most specific first.

$$(\text{fcall-next-method } \text{arg}^* \text{current args})$$

▷ From within a method, call next method with *args*; return *its values*.

$$(\text{gno-applicable-method } \text{generic-function } \text{arg}^*)$$

▷ Called on invocation of *generic-function* on *args* if there is no applicable method. Default method signals **error**. Not to be called by user.

$$\left\{ \begin{array}{l} \text{finvalid-method-error } \text{method} \\ \text{fmethod-combination-error} \end{array} \right\} \text{control arg}^*$$

▷ Signal **error** on applicable method with invalid qualifiers, or on method combination. For *control* and *args* see **format**, page 36.

$$(\text{gno-next-method } \text{generic-function } \text{method } \text{arg}^*)$$

▷ Called on invocation of **call-next-method** when there is no next method. Default method signals **error**. Not to be called by user.

$$(\text{gfunction-keywords } \text{method})$$

▷ Return list of *keyword parameters* of *method* and **T** if other keys are allowed.

$$(\text{gmethod-qualifiers } \text{method}) \quad \triangleright \text{ List of qualifiers of } \text{method}.$$

10.3 Method Combination Types

standard

▷ Evaluate most specific **:around** method supplying the values of the generic function. From within this method, **fcall-next-method** can call less specific **:around** methods if there are any. If not, or if there are no **:around** methods at all, call all **:before** methods, most specific first, and the most specific primary method which supplies the values of the calling **fcall-next-method** if any, or of the generic function; and which can call less specific primary methods via **fcall-next-method**. After its return, call all **:after** methods, least specific first.

and|or|append|list|nconc|progn|max|min|+

▷ Simple built-in **method-combination** types; have the same usage as the *c-types* defined by the short form of **mdefine-method-combination**.

$$(\text{mdefine-method-combination } \text{c-type}$$

$$\left\{ \begin{array}{l} \text{:documentation } \text{string} \\ \text{:identity-with-one-argument } \text{bool}[\text{NIL}] \\ \text{:operator } \text{operator}[\text{c-type}] \end{array} \right\})$$

▷ **Short Form.** Define new **method-combination** *c-type*. In a generic function using *c-type*, evaluate most specific **:around** method supplying the values of the generic function. From within this method, **fcall-next-method** can call less specific **:around** methods if there are any. If not, or if there are no **:around** methods at all, return from the calling **call-next-method** or from the generic function, respectively, the values of (*operator* (*primary-method* *gen-arg*^{*})*), *gen-arg*^{*} being the arguments of the generic function. The *primary-methods* are ordered $\left\{ \begin{array}{l} \text{:most-specific-first} \\ \text{:most-specific-last} \end{array} \right\} [\text{most-specific-first}]$ (specified as *c-arg* in **mdefgeneric**). Using *c-type* as the *qualifier* in **mdefmethod** makes the method primary.

$$(\text{mdefine-method-combination } \text{c-type } (\text{ord-}\lambda^*) ((\text{group}$$

$$\left\{ \begin{array}{l} * \\ \text{qualifier}^* [\text{ }] \\ \text{predicate} \\ \text{:description } \text{control} \\ \text{:order } \left\{ \begin{array}{l} \text{:most-specific-first} \\ \text{:most-specific-last} \end{array} \right\} [\text{most-specific-first}]^* \\ \text{:required } \text{bool} \\ \left\{ \begin{array}{l} (\text{:arguments } \text{method-combination-}\lambda^*) \\ (\text{:generic-function } \text{symbol}) \\ (\text{declare } \widehat{\text{decl}}^*)^* \\ \text{doc} \end{array} \right\} \text{body}^{\text{P}_k}) \end{array} \right\})$$

▷ **Long Form.** Define new **method-combination** *c-type*. A call to a generic function using *c-type* will be equivalent to a call to the forms returned by *body*^{*} with *ord-λ*^{*} bound to *c-arg*^{*} (cf. **mdefgeneric**), with *symbol* bound to the generic function, with *method-combination-λ*^{*} bound to the arguments of the generic function, and with *groups* bound to lists of methods. An applicable method becomes a member of the leftmost *group* whose *predicate* or *qualifiers* match. Methods can be called via **mcall-method**. Lambda lists (*ord-λ*^{*}) and (*method-combination-λ*^{*}) according to *ord-λ* on page 17, the latter enhanced by an optional **&whole** argument.

$$(\text{mcall-method}$$

$$\left\{ \begin{array}{l} \text{method} \\ (\text{mmake-method } \widehat{\text{form}}) \end{array} \right\} [(\left\{ \begin{array}{l} \text{next-method} \\ (\text{mmake-method } \widehat{\text{form}}) \end{array} \right\}^*)^*])$$

▷ From within an effective method form, call *method* with the arguments of the generic function and with information about its *next-methods*; return *its values*.

11 Conditions and Errors

For standardized condition types cf. Figure 2 on page 31.

$$(\text{mdefine-condition } \text{foo } (\text{parent-type}^* \text{condition})$$

$$\left\{ \begin{array}{l} \text{slot} \\ \left\{ \begin{array}{l} \text{:reader } \text{reader}^* \\ \text{:writer } \left\{ \begin{array}{l} \text{writer} \\ (\text{setf } \text{writer}) \end{array} \right\}^* \\ \text{:accessor } \text{accessor}^* \\ \text{:allocation } \left\{ \begin{array}{l} \text{:instance} \\ \text{:class} \end{array} \right\} [\text{instance}] \\ \text{:initarg } \text{initarg-name}^* \\ \text{:initform } \text{form} \\ \text{:type } \text{type} \\ \text{:documentation } \text{slot-doc} \end{array} \right\} \\ \left\{ \begin{array}{l} (\text{:default-initargs } \text{name value}^*)^* \\ (\text{:documentation } \text{condition-doc}) \\ (\text{:report } \left\{ \begin{array}{l} \text{string} \\ \text{report-function} \end{array} \right\}) \end{array} \right\} \end{array} \right\}^*$$

▷ Define, as a subtype of *parent-types*, condition type *foo*. In a new condition, a *slot*'s value defaults to *form* unless set via *initarg-name*; it is readable via (*reader* *i*) or (*accessor* *i*), and writable via (*writer* *value* *i*) or (**setf** (*accessor* *i*) *value*). With **:allocation** **:class**, *slot* is shared by all conditions of type *foo*. A condition is reported by *string* or by *report-function* of arguments condition and stream.
